Acknowledgement

Life is a journey and companions are an essential part to successfully complete it. Along with the visual role of certain people, many others contribute invisibly to the success of our journey. By writing this acknowledgement, I wish to pay thanks to those who contributed to the part of my journey to Doctorate, which of course, is not sufficient to pay for the immense help and support I got from these people.

I sincerely thank my supervisors Dr. Lalji Singh and Dr. K. Thangaraj for giving me an opportunity to be a part of their lab. It was in fact the beginning of a golden period leading to a successful destiny. While Dr. Lalji Singh provided a thrust to work further by the regular assessment of the work and innovative suggestions, the late ending discussions with Dr. Thangaraj were immensely fruitful. It was Dr. Lalji Singh, who seeded the project of sex-determination at Edinburgh in 1978, when I was not even born. I came to know Dr. Lalji as the father of DNA fingerprint in India, for the first time when I was in senior secondary (1998). But 'secrets of the nature', I did not even know I would have an opportunity to be his student.

Nonetheless, it was a great pleasure to have Dr. Thangaraj as my immediate supervisor, who was readily available for the discussions and troubleshooting throughout days and nights. I pay more than possible homage to him and a trial to describe the same in words would limit my respect for him. He was more than a teacher so I call him "Guru". He made me an independent researcher in the lab. It was not only the science he taught to me but also how to be an ideal human being. It takes courage to be so down to earth, patient, humble, and moreover a true human being. I have eternal pleasure to say
that I was a student of a person who has got all that. I owe all the success in professional fronts to my mentors.

Nice were the days during course work when we used to laugh and experience the classrooms similar to our M.Sc. days with the company of Mr. Bhairab Nath Singh, Mr. Pavan Kumar T.L. and the so named 'everhappy' Mr. Bhubananda Sahu. It was a nice transition from a student busy with the books to a researcher busy with the pipettes in lab. The books in the hands were replaced wit the research articles, so feeling 'light' in 'weight' but the concepts and the depth of concepts was discovered to be 'heavy' in 'weight'. Going ahead into the list of numerous others who extended the hands were Mr. A.G. Reddy, who never shook his head in 'NO' for anything I needed in the lab or otherwise. He is a humble person who cooperated with all of us in the lab without drawing the line of biasedness at any front.

Many Thanks to Ms. Ch. Annapurna and Mr. Subhash Chandra (extinct species now) for extending help at every stage of the work throughout my stay at CCMB. It was the memorable time of discussions over meals, tea or anywhere we could have time to sit and discuss. It was equally exciting to compare the South Indian and North Indian cultures where we had numerous evidences to support one. It was me and Subhash who used to support North India while Annapurna alone to speak about South India. But it was felt that cultures do not impose anything, it was the inherent nature, which counts. My stay at CCMB would have been uneasy without their company. Weekends could be made enjoyable by planning the trips or dining together. I will always feel their presence with me.

Equally important, I am grateful to my dear friends Ms. Nikita Thakur and Ms. Shalini Mani Tripathi, who we readily available for more than what they could do, despite being in a different lab.
It were the birthday, new year or other festival celebrations with Shalini, Nikita and Bhairab throughout our stay at CCMB which delighted the pleasure of life among the days running busy in the lab work.

It is an occasion to thank various M.Sc. students who were a part of our lab during their dissertation. Thousands of PCR's were run along with the students Ms. Rajani Vutukuri and Ms. Madhavi Sakhamuri that resulted in enormous amount of work done. It was great contribution of these students because of which I could convert all our data into publications. It would have been a dream to publish so fast without the help from these students. Of late, Mr. Krupakar, Mr. Kranthi Kumar and Ms. Gayatri ran the data generation. It was also helpful having Ms. Pryamvada Singh and Ms. Kanchan Mishra with me. It was not only the lab work we shared but also an excellent atmosphere, which we created in the lab.

I would not fail in thanking others who had been behind the curtain but whose contribution was crucial for the timely completion of the work. Thanks to Dr. N. Nagesh who had provided all the help for sequencing and genotyping. Equally important thanks to Mr. Nageshwar Rao and Mr. G. Giridharan for helping in graphics. Many thanks to Mr. Suryanarayana, Mr. Hanif and Mr. Vishwanath for helping in making things readily available, which could help in finishing experiments timely.

Writing the above may be just words, which are really not enough to pay for the help and support I got from all above, but it would be their love and respect in my heart, which will always remind of these people and I will always miss my days at CCMB.

Rajender Singh
