Acknowledgements

My voyage through Ph.D. years has been the most remarkable stretch that I have traversed so far in the journey of life. It has taught me a lot, both in terms of science and otherwise. More importantly, it has helped me to grow in stature, instill some invaluable self-confidence, as well as a vision and determination to do something big in life. I earnestly believe that this journey has immensely helped in preparing myself to face the seamless and fascinating world of research that entice me into the future...

This journey would have been impossible but for the love, care and support that I received from all quarters of IMTECH. At the outset, let me thank all my friends and well-wishers who have made my Ph.D. life not only pleasant and enjoyable, but also something to be cherished forever.

I owe my greatest debt and gratitude to my Ph.D. mentor who has been the soul behind every effort that I have put forth in this thesis. His scientific ingenuity, analytical prowess and trouble-shooting skills always put me in good stead, especially during those phases when experiments and strategies ran into rough weather, and I was groping in “darkness”. In spite of my shortcomings, he gave me complete freedom to plan and design experiments, and never put any kind of pressure on me. With the passage of time, my admiration and regard for him have only magnified in logarithmic proportions. His patience, perseverance and ever-forgiving attitude are attributes I will always try to emulate. My only regret is that I have not been able to utilize his scientific skills to the best of my ability. However, the invaluable first lessons of experimental science that I have learned from him will remain with me all through my life. His good nature and integrity in everything he did will always remain very close to my heart.

Dr. Anand Bachhawat has been a perfect role model for youngsters like me who are just stepping into the exciting world of scientific inquiry. His enthusiasm and pure love for science is indeed infectious. I have always admired his inquisitive nature and never-give-up attitude. His love, care and concern not only for his own students but also for everyone in general makes him a very special person. No wonder why everyone loves and respects him so!

I was fortunate to have someone like Dr. Alok Mondal as my genuine well-wisher. He was always supportive as well as very concerned about my progress in research. Especially after our labs started sharing the same lab space, I got more opportunity to interact with him at closer quarters, and have certainly benefited from this exposure.

My obligation also goes to our former Director, Dr. Amit Ghosh, under whose tenure I joined this Institute. Dr. Girish Sahni, who has taken over the baton, deserves special appreciation for the positive changes that he has brought in after he has assumed office. He has taken proper care to provide all necessary infrastructure to facilitate science and scientific temper in this institute.

The ambience in our lab has been very pleasant and amiable, thanks to the wonderful labmates that I was gifted with. Rohini, with whom I shared very few days, left behind an indelible impression of her genuine and caring spirit. Vibha, with whom I started my work, was very considerate and helpful. Rekha impressed me with her stamina for hard work. Her total dedication towards work and her undivided focus on the task at hand was awe-inspiring! I also shared very amicable relationship with
Jaggu, for getting used to considering a limit and acting in passion for science. I liked Mannan's ability which has settled me towards different technical aspects. Suman, Shekar, Rachna etc. as well as Santhosh, apart from AKB/KG student family for the many enjoyable hours we spent together over the years.

A considerable share of my Ph.D. life was spent with students of Dr. Bachhawat. Kailash and Cheeku were life and spirit in the lab during the initial years of my Ph.D. They never allowed a dull moment to settle in. Srikanth was very sharp and shrewd, and I always relished my discussions with him, whether it was science or sports. Ganguli has been the most systematic and methodical person I have ever met. He always lent his helping hand whenever I required him. I foresee an illustrious career in science beckoning him. The indomitable Jaspreet has been a big inspiration to me with her intellectual bent of mind and passion for science. I also enjoyed the company of the usually silent Neha; the good natured and pleasing Amit Yadav; a terrific entertainer in the form of Anil; the multi-talented Akhilesh - a real genius; as well as the most intelligent, hard working and focussed Hardeep. I also thank the ever-smiling Rajkumar Ji for the love and care that he has always bestowed upon me.

The tea table at the cafeteria, twice a day, was a perennial source for rejuvenating my spirits. With fruitful conversations/discussions always pouring out onto the table, it tremendously helped in recharging my cells to work more effectively in the lab as well. Thanks to the students of GS – Jaggu, Suman, Shekar, Rachna etc. as well as Santhosh, apart from AKB/KG student family for the many enjoyable hours we spent together over the years.

Co-inhabitants in our lab during the later part of my PhD - Monika, Deepak, Diya, Randeep, Anu and Netrapal - offered great company. My special thanks goes to Deepak for carrying out all sequencing work on time. I also especially enjoyed the lighter side of life whenever Netrapal was around, always alive with his pranks and jokes.

On the personal front, I befriended some of the most amazing persons that I could possibly come across, during my Ph.D. tenure. The tireless and never resting Manoj, my beloved batch mate, gave me the feeling that he was a man and machine all rolled into one. I spent a lot of time during the initial half of my Ph.D., especially in the mornings, walking with him through the campus, before we would proceed to our respective labs. His unmatched enthusiasm and commitment towards his work is exemplary. He left a big void in my life when he left IMTECH for his post-doctoral assignment. Saurabh and Amrita were the greatest “singular” blessing that I had in my Ph.D. life. My stay would have been unimaginable without their congenial companionship all through this passage of life. I fervently hope that the special intimacy that we share will always persist, come what may. I also recall with much fondness the amiable company that I found in Amit (Kush) Sir till the very last moment he was in IMTECH.

Pradipta has been the most loveable person I ever came across during my Ph.D. I was very fond of him, and thoroughly relished every moment I spent with him. Whenever I was tensed, anxious or depressed, I used to find solace in him. He always succeeded in cheering me up and driving away my blues. All of my...
other batch mates - Rahul, Amit, Arvind, Pooja, Monika, Om, Nandni, Swati & Vandana - struck a cordial relationship with me, which I will ever cherish.

There are lots and lots of seniors and juniors who have contributed in making my Ph.D. life truly extraordinary and unforgettable. Due to the sheer number and the fear that I may miss out on some, I will not endeavour to name anyone or everyone. But I will be failing in my duty if I do not mention a few of my seniors who have left IMTECH a long time ago, but after making an indelible impression in my heart. I owe my special thanks to Lakshmipathi, Monika (Dahiya), Biju, Jayeeta, Naresh & Souvik, among others, for all the affable warmth that I shared in their cozy company.

I also acknowledge the staff of library, BIC, instrumentation, administration as well as the stores for all their help from time to time. My heart-felt thanks are also due to our beloved mess workers who helped me to remain as fit as a fiddle all these years.

My greatest pillar of strength has been the unflinching support and bountiful blessings that I had from my family every moment of my life. They constantly poured all their love and affection on me that it sometimes even choked me to breathlessness. I will never be able to repay them for everything that they have done for me over the years. It is hence with great contentment that I dedicate this work in their honour, especially my most affectionate and dearest parents.

Last, but not the least, I bow to the Lord Almighty for guiding me safely and smoothly, especially through the rough and dark patches. But for His mercy and blessings from above, this thesis would not have taken its final shape and become a reality.
