LIST OF FIGURES

Figure 1.1: Schematic representation of Y deleted chromosome showing the region of deletion. The wild type mouse Y chromosome of RIII is shown on the left for comparison..........................................................28

Figure 2.1: Schematic representation of SOD assay by Xanthine, Xanthine oxidase and NBT...............................................................56

Figure 3.1: Phenotypic differences between normal and Yq-del spermatozoa…….58

Figure 3.2: 2D PAGE of mouse sperm proteome in the pI range of 4-7............60

Figure 3.3: Graphical representation of the fold difference (between normal and Yq-del) in the expression of five differential spots in the pI range of 4-7..............................................................61

Figure 3.4: 2D PAGE of mouse sperm proteome in the pI range of 5-8............64

Figure 3.5: Identification of differential protein spot D1 as calreticulin............65

Figure 3.6: Similar MALDI spectrum of protein spots D2 and D3...................67

Figure 3.7a: Identification of differential protein spot D2 as SPINK2.............66

Figure 3.7b: MS tag 1 from differential protein spot D2.............................68

Figure 3.7c: MS tag 2 from differential protein spot D2.............................69

Figure 3.8a: MS tag and N-terminal sequence identified differential protein spot D3 as SPINK2.........................................................70

Figure 3.8b: Identification of differential protein spot D3 as SPINK2............71

Figure 3.9a: Identification differential protein spot D4 as SOD.....................72

Figure 3.9b: MS tag 1 from differential protein D4.................................73

Figure 3.9c: MS tag 2 from differential protein spot D4.............................74

Figure 3.10a: Identification of differential protein spot D5 as FABP9.............75

Figure 3.10b: MS tag 1 from differential protein spot D5.............................76

Figure 3.10c: MS tag 2 from differential protein spot D5.............................77

Figure 3.10d: MS tag 3 from differential protein spot D5.............................78
Figure 3.10e: MS tag 4 from differential protein spot D5 ................................ 79

Figure 3.11a: Identification of differential protein spot A as hypothetical protein LOC69315 ........................................... 80

Figure 3.11b: MS tag obtained from protein spot A ........................................... 81

Figure 3.12a: Identification of differential protein spot B as SDF2L1 ................. 82

Figure 3.12b: MS tag obtained from protein spot B ........................................... 83

Figure 3.13a: MS tags identified differential protein spot C as hypothetical protein (1700026L06 Riken cDNA) ......................... 84

Figure 3.13b: MS tag obtained from protein spot C ........................................... 85

Figure 3.14: Immunoblotting with calreticulin antibody ..................................... 87

Figure 3.15: Identification of Kazal domain in SPINK2 using the NCBI conserved domain search ......................................................... 88

Figure 3.16: Different probes designed for northern analysis of SPINK2 .......... 89

Figure 3.17a: Northern hybridization using cDNA probes specific to the 5' end of Spink2 mRNA ......................................................... 90

Figure 3.17b: Northern hybridization using cDNA probes specific to the 3' end of Spink2 mRNA ......................................................... 90

Figure 3.18: Western blotting with anti SOD antibody ....................................... 92

Figure 3.19: SOD Assay with Xanthine, Xanthine oxidase and NBT ................. 92

Figure 3.20a, b: Immunolocalization of SOD onto mouse spermatozoa .......... 94

Figure 3.21: Excessive localization of SOD on Yq-del spermatozoa ................. 95

Figure 3.22: Probes designed to different regions of Sod1 mRNA for northern Blotting ......................................................... 96

Figure 3.23a, b: Northern hybridization with Sod1 probes ......................... 97

Figure 3.24: Immunoblotting with anti FABP9 antibody ................................... 98

Figure 3.25: Northern blotting with Fabp9 cDNA probe ................................ 100

Figure 3.26: RT-PCR using Fabp9 primers ........................................... 100

Figure 3.27: Northern blotting with 1700001L19 cDNA as probe ................. 102
Figure 3.28: Domains in SDF2L1 ................................................................. 104

Figure 3.29: Sequence homology of SDF2L1 to SDF2 ........................................ 104

Figure 3.30: Northern blotting with Sdf2l1 cDNA probe ........................................ 105

Figure 3.31: Domains on Hypothetical protein C .................................................. 106

Figure 3.32: Northern blotting with cDNA of 1700026L06 probe ......................... 107

Figure 3.33a: Overexpression of protein spot C in BL21(DE3) cells after induction with IPTG at different time points ........................................ 109

Figure 3.33b: Purification of protein by Ni-NTA column using increasing concentrations of Immidazole .................................................. 109

Figure 3.34: Diamine benzidine chloride test for antigenicity and titer estimation of antibody ................................................................. 110

Figure 3.35: Western blotting with preimmune serum ......................................... 110

Figure 3.36a: Multi-tissue western blotting with antibody raised against protein spot C ................................................................. 112

Figure 3.36b: Comparative western blotting with antibody to protein spot C ....... 112

Figure 3.37: Immunolocalization of protein spot C onto mouse spermatozoa ....... 114

Figure 3.38: Immunolocalization of protein C onto testicular sections using anti protein spot C antibody .................................................. 115

Figure 3.39: Immunolocalization with antibody to protein spot C on testis sections ................................................................. 116

Figure 3.40: Western blotting with anti aromatase antibody .................................. 117

Figure 4.1: Schematic representation of the localization of the differential proteins onto mouse sperm, and their role in sperm function ................. 133

Figure 4.2: Schematic representation of the effect of differentially expressed proteins resulting in subfertility of Yq-del males ................................... 135
