ACKNOWLEDGEMENTS

At the outset I want to thank Dr. Utpal Bhadra, my thesis supervisor for his able guidance, support, and teachings. Without whom this thesis would never have been a reality. I thank him for giving me an opportunity to work in one of my favorite fields, the exciting and challenging world of neurobiology. I am also indebted to him for introducing me to fruit fly the beautiful tiny model system. It was under his guidance that I got full freedom to think and execute independently and carry out experiments without any interference. This has helped me immensely in developing my scientific skills and has boosted up my confidence. Like a true mentor he has nurtured my capabilities and has honed it. He has encouraged me to think logically and to look at a problem from all possible angles, he guided me to have fresh outlook for existing hypotheses.

I owe special thanks to Dr. Manika Pal Bhadra for all her help throughout my PhD tenure both at personal and professional front. She was inspiring and encouraging. It was a rich experience to have scientific discussions with her. I also cherish numerous outings and get-together of ours, where we had great time together and spent some beautiful time with her and her lovely family.

I sincerely wish to thank all previous and present lab members of Dr. Utpal Bhadra's group. It was because of them that the lab had a pleasant work environment and made the working hours enjoyable. The vibrant work atmosphere in the lab spurred me to work hard and for long hours. I wish to thank all my PhD lab mates Pushpavalli, Parveen, Praveen, Satyakeerthi, Sumit and Venkateshwar for all the help, healthy discussions, intellectual work environment, stimulating and invigorating atmosphere, which made the whole of PhD period enjoyable and a great learning experience. The lab
meetings and other discussions with critical assessment of my work helped me immensely.

I want to thank Dr. Shashidhara for establishing such a nice fly lab at CCMB and for all his help including lending me some gal4 line stocks. He was kind enough to give me a guided tour of fly lab on the very first day which was my first encounter with the enigmatic fruit flies. I want to thank all the past and present members of fly lab where I spent a lot of my working hours, for providing a friendly and relaxing work environment. I cherish long hours of stimulating scientific discussions in fly lab. My thanks to Prasanth, Kalpana, Gurudatta, Vasanthi, Mohit, Ram parikshnan, Hina, Vivek, Pallavi, Nagaraj, Nerendra, Krishnan and Usha for the same and for many light moments together.

I specially thank Narasimhaji for preparing fly food and common lab chemicals and for his immense help in maintaining the fly stocks. He was very cooperative in meeting my demand of large food vials and bottles, at times by working after office hours and on Saturdays. I also want to thank the lab boys who worked in VB group, Fly lab and Nectar for helping in carrying out the work smoothly.

I want to thank staffs of instrumentation, electrical, air-conditioning and lab services divisions for all the help rendered by them time to time, in initiating and maintaining the fly entrainment facility, at different rooms during my PhD tenure.

I wish to thank all the past and present member of the microscopy group Sarmaji, Nandhini, Chakravarthi and Nagmalesh for their help. They were extremely helpful and helped me even after office hours and on holidays. They taught me how to use these instruments, particularly the confocal system. With their help I could use them
independently. This helped me tremendously to complete my work that required odd and long hours of use. I am thankful to Nandhini for her technical inputs as well.

I thank the whole of CCMB Instrumentation group staffs for maintaining the facilities in such good shape. My special thanks go to Sekar Ramachandran the head of instrumentation, Dattatrya, Mahesh Prasad, Lora, Asha, Sudatt Tambe, Bapi Raju, Syam Kumar, Giridhara and staffs of server room & photography sections. I also want to thank staffs of animal house specially Jerald Mahesh and Dwarakanath.

My special thanks goes to Mr. Kishore Joshi and other staffs of fine chemicals section including Joseph. Without whose help this thesis could never have been written. Mr. Joshi helped me by giving chemicals at short notices, which proved to be my lifeline and helped me in successfully completing my experiments. I can never thank him enough for this help of his.

I take this opportunity to thank the staffs of Jonaki, Dr. Veena Parnaik’s lab and Dr. Purnima Bhargava’s lab for arranging radioactive isotopes. I also want to thank staffs of liquid Nitrogen facility, Workshop, Photo copying, Dispatch, Administration, Canteen, Security, Transport and all the members of CCMB family for the helps rendered.

I thank past and present members of South wing ground floor for a cordial work atmosphere and all the cooperations. I want to thank Dr. Sunit Singh, Dr. Manjula Reddy and Dr. Mandar Deshmukh for their professional suggestions and for those long discussions. I also want to thank their lab members, Saisree, Dr. Krishnan, Dr. Ashok Khar and his lab members, Dr. Ananth Patel and his group.
I want to thank Hemalatha for helping in thesis formatting, for carrying out printing, typing and other secretarial jobs during my stay at CCMB which saved me from lot of headaches.

I want to specially thank Dr. Lalji Singh, Director of CCMB, for giving me an opportunity to work in this revered institute. I also want to thank him for all the encouragements that he gave me, time to time. The way he has developed the centralized facilities of CCMB in the past few years is highly commendable. Moreover the accessibility of these makes the work much easier. The CCMB work culture that is in practice from the inception of the institute and has been guarded so doggedly by generations instilled a sense of belonging to me. The spirit of freedom and openness along with no hierarchical binding makes it heaven for free scientific thinking. This is further fuelled by highest caliber guest lectures and talks in conferences. I take this opportunity to thank CSIR for fellowship and CCMB for the financial support.

I want to thank Dr. Jeffery C. Hall, Dr. Amita Sehgal, Dr. Jeffery Price, Dr. Paul Hardin and Dr. Veronica Rodrigues immensely, for providing me fly stocks.

I want to thank all my friends at CCMB for their friendship, help and encouragement that helped me cruise through this period. My special gratitude of appreciation goes to Sumit and Praveen. Though they were my lab mates they were much more than just lab mates. They were true friends who were always there for me, appreciating and encouraging my good works and positively criticizing when ever I was wrong. I will cherish all those happy and low moments that we spent together, throughout my life. I really commend them for bearing me even when I was in horrible moods. They helped me throughout my PhD tenure in so many ways that it is difficult for me to pen them
down. But most of all I can never forget their help and support during my most grievous personal loss.

My final and biggest gratitude goes to my lovely loving family. It is my safety net and I can bank on it any time any moment. I owe what ever I am to Bapa, Ma, Nani, Bhai & Itani. Their unconditional love, affection, care and sacrifices for me were always without any question. Their unwavering faith in me and encouragement has always been the source of my confidence. Their timely, apt and positive criticisms help me overcome my shortcomings. I am thankful to my parents for giving me an upbringing of which I am proud of and would love to give the same to my child. I am thankful to my siblings for all their support, friendship and pampering. I can never thank my family enough for what they have done for me. The beauty is they do all this without letting me feel that they are doing anything out of the way for me. I want to thank Mohit and Mugdha for all that love & admiration and to Mohan for giving lovely happy moments. I would also like to thank Bhaina, Tapan bhai and Bhauja for their best wishes. I would love to thank my in-laws for their support, love and cooperation that were very much needed for completing my PhD. My heart felt thanks to Bhabesh for his undying love, unflinching rock solid support, excellent understanding, & untiring help and for being there for me. Finally I would like to thank Almighty for gifting Shree to me who makes everything worthwhile and is an inspiration for me. I owe special thanks to her for being such a cooperating and accommodating infant without whose help this thesis would never have been completed. She gives me the tranquility, which I always longed for.
