# Table of Contents

## 1 Introduction
1.1 Preliminaries and literature review ........................................ 7
1.2 Aim of the thesis ............................................................... 30
1.3 Synopsis of the thesis .......................................................... 30

## 2 Common fixed point theorems for weakly compatible mappings 33
2.1 Introduction ................................................................. 33
2.2 Generalisation of a common fixed point theorem ....................... 36
2.3 Generalization and fuzzification of a fixed point theorem ............ 42
2.4 Improvement in inequality condition ...................................... 47

## 3 Common fixed point theorems for fuzzy mappings 56
3.1 Introduction ................................................................. 56
3.2 Common fixed point theorem using control function .................... 61
3.3 Generalization of fixed point theorems using $G$-class of functions ... 70
3.4 Fixed point for fuzzy mapping in quasi-pseudo-metric space .......... 73
  3.4.1 Main result .............................................................. 77

## 4 Fixed Point Theorems Using Implicit Relations 81
4.1 Introduction ................................................................. 81
4.2 Implicit relations ........................................................... 83
4.3 Common fixed point for weakly compatible mappings .................. 87
  4.3.1 An application .......................................................... 95
4.4 For occasionally weakly compatible mappings .......................... 97
4.5 For mappings satisfying tangential condition .......................... 101

## 5 Fixed point theorems in fuzzy metric spaces 105
5.1 Introduction ................................................................. 105
5.2 Fixed and Coincidence Point in Fuzzy Product Metric Space ........ 106
  5.2.1 Topology Induced by a $G$-Fuzzy Product Metric ................. 107
5.3 Fixed and Coincidence Points in Ultra Fuzzy Metric Space .......... 118
  5.3.1 Fixed point theorem ................................................... 120
  5.3.2 Coincidence point theorem ......................................... 122
6 Applications of fuzzy set theory 126

6.1 Introduction ................................................. 126

6.2 Selection method by fuzzy set theory and preference matrix ........ 126
  6.2.1 Selection using ranking method and preference matrix .......... 131
  6.2.2 Using mutual grading gap for MCDM ............................. 135
  6.2.3 Conclusion: .............................................. 139

6.3 New bandwidth interval based forecasting method using fuzzy time
  series ................................................................. 140
  6.3.1 For forecasting student enrollments .............................. 142
  6.3.2 Simplified computation of fuzzified data for forecasting rainfall 147
