# Table of Contents

## Chapter 1

**Review of literature and introduction**

1.1 Malaria
1.2 Current scenario of malaria
1.3 Plasmodium life cycle
   1.3.1 Asexual stage
   1.3.2 Sexual stage
1.4 Clinical features of malaria
   1.4.1 Non-severe malaria
   1.4.2 Severe malaria
      1.4.2.1 Cerebral malaria
      1.4.2.2 Severe malarial anemia
      1.4.2.3 Pregnancy associated malaria
      1.4.2.4 Severe malaria (Other)
         1.4.2.4.1 Prostration
         1.4.2.4.2 Acidosis and respiratory distress
         1.4.2.4.3 Hypoglycemia
         1.4.2.4.4 Multiple seizures
1.5 Cytoadherence of *Plasmodium falciparum*
   1.5.1 Adhesion to host microvascular endothelial cells
   1.5.2 Platelet-mediated clumping
   1.5.3 Rosetting
1.6 Antigenic variation and variant surface antigens of *Plasmodium falciparum*
   1.6.1 PfEMP1
      1.6.1.1 Domains of PfEMP1
      1.6.1.2 PfEMP1 domain arrangement and nomenclature
      1.6.1.3 Var gene organization
   1.6.2 SURFIN proteins
   1.6.3 RIFIN proteins
   1.6.4 Sub-Telomeric Variable Open Reading Frame (STEVOR) family
1.7 Introduction
1.8 Objectives

## Chapter 2

**Materials and methods**

2.1 Expression and purification of recombinant human gC1qR (r-gC1qR)
2.2 *P. falciparum* culture
2.3 Cell culture
2.4 Cytoadherence assays with soluble receptors and panning
2.5 Inhibition of cytoadherence using C1q
2.6 Cytoadherence assays with cells
2.7 Inhibition of cytoadherence using r-gC1qR
2.8 Inhibition of cytoadherence using mouse sera raised against gC1qR
2.9 Platelet preparation
2.10 Platelet-mediated clumping assays
2.11 Inhibition of clumping by r-gC1qR
2.12 Inhibition of clumping by mouse sera raised against gC1qR
2.13 Rosetting assays
2.14 Flow cytometry
2.15 Immuno-fluorescence assays
2.16 Preparation of total RNA from \textit{P. falciparum}
2.17 Reverse transcriptase polymerase chain reaction (RT-PCR)
2.18 Real time PCR
2.19 Cloning PFD1015c domains in pRE4 vector
2.20 Infected-erythrocyte binding assay (iEBA)
2.21 Biotinylation of gC1qR
2.22 Study area
2.23 Patients
2.24 Collection of parasites
2.25 Estimation of parasitemia by Real time PCR
2.26 Multiplicity of infection
2.27 Definitions and statistical methods

\textbf{Chapter 3}

\textbf{Results}

3.1 \textit{P. falciparum} uses gC1qR as a receptor to adhere to host endothelial cells
  3.1.1 Characterization of purified recombinant gC1qR (r-gC1qR)
  3.1.2 Adhesion of \textit{P. falciparum} IGH-CR14 IEs to purified r-gC1qR
  3.1.3 Adhesion of \textit{P. falciparum} IGH-CR14 in presence of Clq and HA
  3.1.4 Mouse sera raised against r-gC1qR specifically recognizes gC1qR in whole cell lysates
  3.1.5 Expression of gC1qR on human endothelial cells
  3.1.6 \textit{P. falciparum} IGH-CR14 selected for adhesion to gC1qR show increased adhesion to HBMEC
  3.1.7 Adhesion of \textit{P. falciparum} IGH-CR14+ to resting and TNF-\alpha stimulated HBMEC
  3.1.8 \textit{P. falciparum} IGH-CR14+ uses gC1qR as a receptor for adhesion to HBMEC
3.2 \textit{P. falciparum} IGH-CR14+ uses gC1qR as a receptor to form platelet-mediated agglutinates
  3.2.1 Expression of gC1qR on resting and thrombin-activated platelets
  3.2.2 Platelet-mediated clumping of \textit{P. falciparum} IGH-CR14 variants
  3.2.3 Inhibition of platelet-mediated clumping by r-gC1qR and mouse sera raised against gC1qR

3.3 \textit{P. falciparum} ligand for gC1qR
  3.3.1 PfEMP1 containing membrane fraction of \textit{P. falciparum} IEs bind to r-gC1qR
  3.3.2 Selection of \textit{P. falciparum} 3D7 for adhesion to gC1qR
3.3.3 Comparison of levels of PfEMP1 transcript among 3D7 variants
3.3.4 PFD1015c has four adhesive domains
3.3.5 Expression of PFD1015c adhesive domains on mammalian cell surface
3.3.6 Detection of bound gC1qR on COS cells expressing PFD1015c
3.4 Role of *P. falciparum* cytoadherence in pathogenesis of severe malaria
   3.4.1 Patient characteristics
   3.4.2 Cytoadherence characteristics of *P. falciparum* isolates
   3.4.3 Association between cytoadherence and severe malaria
