I owe debts of gratitude to those who were so generous with their time and expertise and it is for their help and support the whole thing came up in a nice form of written presentation. At the end of my PhD, I would like to thank them all.

First of all, I give my sincere thanks to Dr. Chetan Chitnis, my PhD supervisor. I owe many debts for the patient advice I received from him. This thesis would not have got its present shape without his intellectual ideas. He was always optimistic in extracting positive outcome from experiments, which otherwise, I thought were unsuccessful. I acknowledge him for his vision, guidance, patience, affection and efforts to explain me the complex things in a very simple way. His being with me led me to develop a critical sense of thinking. Apart from being associated scientifically, he guided me through several difficult situations during my Ph.D. He is not only a great scientist but a nice human too. Merely to be in his presence and hear his discourse was an education and a pleasure indeed.

I would like to thank Prof. V. S. Chauhan, director of ICGEB, for giving me opportunity to pursue PhD in the great working atmosphere of ICGEB.

Further, I would like to thank Dr. Shams Yazdani, Dr. Pawan Malhotra, Dr. Amit Sharma, Dr. Deepak Gaur and Dr. Asif Mohammad for their help throughout my stay. Their invaluable suggestions, whenever needed, are gratefully acknowledged.

I am pleased to record my debt to Shailja Singh whose help during this work is invaluable. Her brilliant intellect was a great help to me. At times she had gone out of the way to help me all through this. She has unfailingly extended her help and support to me. I give her my sincere thanks.

I am grateful to Dr. Pushkar Sharma, National Institute of Immunology, New Delhi for sharing merozoite isolation procedures; Dr. Alan Cowman, Walter and Eliza Hall Institute for Medical Research, Melbourne for giving *P. falciparum* 3D7Δ175 parasite line; Dr. Osamu Kaneko, University of Nagasaki, for providing anti-CLAG3.1 sera; Dr. Ross Coppell, Monash University, Melbourne for sharing anti-MSP4 sera; Dr. Manoj Duraisingh, Harvard School of Public Health, Boston, giving anti-RH2a/b
sera and Dr. Amit Sharma, ICGEB, New Delhi for generously providing anti-NAPL sera.

During the initial stages of my research work, the senior lab members, namely, Anup, Sanjeev, Kalyan, Arindam, Suchi, Anand, Shikha, Shailja, Nivedita and Rushdi showed tireless patience and extended their cooperation in every practical way and manner. My special thanks to Anup for teaching me handling of parasite culture and basics of molecular biology. I thank Sanjeev for his help with protein expression and purification. I would also like to thank Nivedita for her critical suggestions in designing experiments. Sweet memories of Nivedita will always stay with me. I thank Shikha for always pushing me to work whenever I was misutilizing time. I learned time management and planning from Rushdi. Patient advice by Dr. Shams Yazdani during my lab rotation is duly acknowledged. I am grateful to all of them for the encouragement and constant support. I convey to them my very sincere thanks.

I would like to give a special note of thanks to the present lab members who were ever ready to help me and were there to encourage me all the time. More specifically, I thank all of them for maintaining a congenial atmosphere in the lab. Love and encouragement by junior lab members namely Abhisheka, Rukmini, Sonal, Faiza, and Urwashi is duly acknowledged. They extended their support by generously providing free access to their cupboards. Special thanks to Hafiz for his constructive criticism and excellent advices. Haseeb, Amel and Bijender were always ready to help. I thank them for their support and encouragement.

Notably, while doing an important work like the present one, the ebb and flow of time is a factor to reckon with, and it is here that the value of friends and batchmates is most realised. My sincere friends and batchmates have constantly encouraged me to go ahead in this venture and have always given me hopefulness. I give all of them my heartiest thanks. I would like to thank all my batchmates, namely, Prashant, Kris, Kalyan, Meha, Deepti, Hafiz, Grace, Shashank, Sumona, Aseem, Namita, Viru and Subhasis for helping me get through the difficult times, and for all the emotional support, camaraderie, entertainment, and caring they provided. My special thanks to Kris, Prashant, Kalyan and Meha for taking good care of me when I was sick, being with me whenever I needed them and most importantly, I never felt lonely in their
presence. The good time spent with them will be in my sweet memories. I would also like to acknowledge Yukti for all her support.

I would also like to thank my roommate and friend, Pavnish for serving me morning tea.

I extend my gratitude to my friends at Taj Enclave, namely, Shamimul Hauqe, Mozammil Amir, Saquid, Sharique and Fahim bhai. I felt like in home with them. Whenever I wanted a weekend break, I spent time with them. That helped me to relax so that I could do work with fresh energy. Moral support and care provided by Faiz and Wazid is also acknowledged.

Above all, I am grateful to my parents who always kept me away from family responsibilities and encouraged me to concentrate on my studies. It would not have been possible to achieve this without their blessings and unflinching support. Their encouragement and belief in me deserve heartiest thanks. My special gratitude is due to my brothers, sisters and their families for their loving support.

I extend my gratitude to my fiancée Tazeen for always encouraging me and having patience with me. She helped me to concentrate on completing this dissertation and provided emotional support during the course of this work.

I would also like to acknowledge ICGEB administrative staff members for making all the formalities simplest for the students. Especially, I thank Ms. H. S. Narayanan, chief of administration, for being very cooperative and taking good care of students. Help by Surya Rawat in ordering reagents is also acknowledged. I extend my gratitude to animal house staff. Dr. Chandramouli made sure that users do not get any problem. Ashok and Rakesh helped me to work with mice.

No research work of enduring value can be accomplished without the support of the funding agency. I acknowledge my gratitude to the UGC for financially sustaining me during the whole period of research.
