3.2. Detection of HSV-1 and HSV-2 infections in oral cancer patients by ELISA

3.2.1. Reagents and Chemicals for the ELISA

3.2.2. Procedure for the ELISA

3.3. Detection of HPV-16 and HPV-18 DNA from oral cancer tissue samples

3.3.1. Maintenance and storage of HPV DNA probes

3.3.1.1. Reagents and chemicals for Transformation of E. coli

3.3.1.2. Procedure for transformation of pBR 322-HPV recombinant probe plasmids in E. coli

3.3.2. Isolation of Recombinant pBR322- HPV Plasmids DNA from E. coli

3.3.2.1. Reagents and chemicals for Plasmid isolation

3.3.2.2. Procedure for Plasmid Isolation

3.3.3. Excision of HPV probe DNA from recombinant vector

3.3.3.1. Reagents and chemicals for restriction digestion

3.3.3.2. Procedure for restriction digestion

3.3.4. Agarose gel electrophoresis

3.3.4.1. Reagents and chemicals for agarose gel electrophoresis of DNA

3.3.4.2. Procedure for agarose gel electrophoresis
3.3.5. Electroelution of DNA probes from agarose gel

3.3.5.1. Reagents and chemicals for electroelution

3.3.5.2. Procedure for the elution of DNA fragments from agarose gel

3.3.6. Genomic DNA extraction

3.3.6.1. Reagents and chemicals for genomic DNA extraction

3.3.6.2. Procedure for genomic DNA extraction from tissue samples

3.3.7. Restriction digestion of genomic DNA

3.3.7.1. Reagents and chemicals used for digestion of genomic DNA

3.3.7.2. Procedure for Restriction digestion of genomic DNA

3.3.8. Capillary blotting of genomic DNA

3.3.8.1. Reagents and materials for capillary blotting

3.3.8.2. Procedure for capillary blotting

3.3.9. HPV DNA probes labeling

3.3.9.1. Reagents and solutions for DNA labelling

3.3.9.2. Procedure for DNA labeling

3.3.10. Hybridization of Genomic DNA with labelled HPV Probes

3.3.10.1. Reagents and chemicals for hybridization

3.3.10.2. Procedure for Probe Hybridization

3.4. Isolation and quantification of circulating immune complexes (CIC) from oral cancer patients

3.4.1. Antibody to sheep red blood cells raised in rabbits
3.4.1.1. Reagents and materials for production of anti-sRBC serum

3.4.1.2. Procedure for production of anti-sRBC antibodies

3.4.2. Standardisation of number of sheep red blood cells (sRBC) and its sensitization

3.4.2.1. Reagents and chemicals for standardisation of number of sRBC

3.4.2.2. Procedure for Standardisation of number of sRBC

3.4.3. PEG precipitation and compliment consumption assay

3.4.3.1. Reagents and chemicals for the assay

3.4.3.2. Procedure for PEG precipitation and compliment consumption assay

3.5. Determination of Immunoglobulin Classes in Circulating Immune Complex

3.5.1. Quantification of Immunoglobulin classes by ELISA

3.5.1.1. Reagents and chemicals for Quantification of Immunoglobulin classes by ELISA

3.5.1.2. Procedure for Quantification of Immunoglobulin classes by ELISA

3.6. Purification and Characterisation of Oral Cancer Antigen

3.6.1. Affinity purification of CIC using Protein-A column

3.6.1.1. Reagents and Chemicals For Protein A Column

3.6.1.2. Procedure for purification of CIC

3.6.2. Sephadex G-200 gel filtration of CIC
3.6.2.1. Reagents and materials required for the G-200 gel filtration

3.6.2.2. Procedure for Sephadex G-200 gel filtration

3.6.3. Sodium dodecyl sulphate polyacrylamide gel electrophoresis (SDS PAGE)

3.6.3.1. Reagents and chemicals for SDS-PAGE

3.6.3.2. Procedure for SDS PAGE

3.6.3.3. SDS-PAGE under reducing condition

3.7. Detection of oral cancer antibody from patients’ sera by ELISA

3.7.1. Reagents for ELISA

3.7.2. Procedure for detection of oral cancer antibody from patients’ sera by ELISA

3.8. Production of Polyclonal antibody against the Oral Cancer antigen in rabbit

3.8.1. Preparation of pure antigen from PAGE

3.8.1.1. Reagents and chemicals for antigen elution

3.8.1.2. Procedure for antigen elution from the PAGE

3.8.2. Immunization of rabbit with oral cancer antigen

3.8.2.1. Reagents and Chemicals for immunization

3.8.2.2. Procedure for immunization of rabbit

3.8.3. Purification of IgG by DEAE-Cellulose Chromatography

3.8.3.1. Reagents and Chemicals for the ion exchange chromatography

3.8.3.2. Procedure for the ion exchange chromatography

3.8.4. Gel double diffusion (Ouchterlony method)
4.3.2. Various classes of Immunoglobulin present in the Circulating Immune complex

4.3.3. Purification and characterisation of Oral cancer antigens from CIC

4.3.3.1. SDS PAGE analysis of CIC

4.3.3.2. Protein A purification of CIC

4.3.3.3. Gel filtration analysis of CIC

4.3.4. Immunoreactivity of the oral cancer antigen

4.3.4.1. Immunodiffusion analysis

4.3.4.2. ELISA for the Detection of Tumor associated-antibodies in cancer patients

4.3.4.3. Protein blot analysis of oral cancer antigen from CIC

Summary

Chapter V. REFERENCES
