Synopsis viii

### CHAPTER 1

**Introduction** 1  
1.1 Review of literature 11  
1.2 National status of the present work 14

### CHAPTER 2

**Materials and Methods** 15  
2.1 Patient and control recruitment 16  
2.2 Chromosome analysis 16  
2.2.1 Reagents required for the chromosome analysis  
2.2.2 Procedure  
2.3 DNA extraction 20  
2.3.1 Reagents required for the DNA isolation  
2.3.2 Procedure  
2.4 Genotyping 23  
2.5 Sequence analysis 25  
2.6 Statistical analysis 26  
2.7 RNA folding prediction 28  
2.8 In silico analysis of regulatory sequences 28  
2.9 Molecular modeling and Docking 28
2.10 Screening for heterozygosity at androgen receptor locus 29
2.11 Methylation Status of the X chromosome 29
2.12 Estimation of degree of skewing 30
2.13 Platelet Proteomics 30
    2.13.1 Subjects
    2.13.2 Isolation of platelets for protein analysis
    2.13.3 Cell lysis
    2.13.4 Protein quantitation
    2.13.5 Two-dimensional gel electrophoresis
    2.13.6 Silver Staining
2.14 MALDI-TOF MS analysis 32
    2.14.1 In-gel digestion protocol
        2.14.1.1 Reagents required
        2.14.1.2 Procedure
2.15 Peptide mass fingerprint analysis 35

CHAPTER 3

Detoxification gene polymorphisms in recurrent early pregnancy loss 36

3.1 Introduction 37
3.2 Results 39
3.3 Discussion 52

CHAPTER 4

Polymorphisms in the genes involved in the development of vascular circuitry in recurrent early pregnancy loss 56

4.1 Introduction 57
4.2 Results 61
4.3 Discussion 63
CHAPTER 5

Polymorphisms in the genes involved in the estrogen metabolism association with recurrent early pregnancy loss

5.1 Introduction 67
5.2 Results 71
5.3 Discussion 73

CHAPTER 6

Role of skewed X-chromosome inactivation in recurrent early pregnancy loss

6.1 Introduction 79
6.2 Results 80
6.3 Discussion 82

CHAPTER 7

Does HLA-G polymorphisms predict the risk of recurrent early pregnancy loss

7.1 Introduction 85
7.2 Results 86
7.3 Discussion 92

CHAPTER 8

Role of anandamide hydrolase polymorphisms in recurrent early pregnancy loss

8.1 Introduction 96
8.2 Results 97
8.3 Discussion 99
CHAPTER 9

Association of trinucleotide repeat (CAG) length of androgen receptor gene with the risk of recurrent early pregnancy loss

9.1 Introduction 103
9.2 Results 105
9.3 Discussion 107

CHAPTER 10

Role of gene polymorphisms involved in the development of thrombophilias in recurrent early pregnancy loss

10.1 Introduction 109
10.2 Results 112
10.3 Discussion 113

CHAPTER 11

Proteomic analysis of platelets in recurrent early pregnancy loss

11.1 Introduction 116
11.2 Results 117
11.3 Discussion 121

CHAPTER 12

Discussion 123
