Acknowledgements

Foremost, I would like to express my sincere gratitude to my advisor Dr Sunil K Lal for his continuous support, patience, motivation and enthusiasm. His guidance helped me immensely in all my research and writing of this thesis. I could not have imagined having a better advisor and mentor for my Ph.D study.

I am grateful to Prof. Virander S. Chauhan, Director, ICGEB for giving me an opportunity to work in this institute and for his constant support and encouragement during this study. I would like to acknowledge Dr. Vijay Kumar and Dr. Shahid Jameel, for their moral support and guidance throughout my stay in the Virology Group. I am also greatly thankful to all faculty members of ICGEB for their support and timely help during my Ph.D. programme.

I was initiated into wet lab research at ICGEB in Dr Amit Sharma’s lab where I learnt the niceties of protein structural biology and spent a memorable time under his mentorship. He is an excellent teacher, patient with his students and ever encouraging. I look forward to working with him in future.

I sincerely acknowledge Indian Council for Medical Research, New Delhi for the award of Junior and Senior Research Fellowships that enabled me to secure admission and continue my Ph.D. programme successfully.

Dr Asimdham Battacharya with whom I worked during my rotation period in the Malaria Research Group has always been a true mentor. I am thankful to him for not only teaching me techniques of protein purification but also good conduct and time management in science and life. One of finest gentleman I know, Arv, as I call him, is now one of my closest friends and I am thankful to you for everything I have learnt from you, in and out of science.
My sincere gratitude goes out to Kedarji and Nazim without whose assistance the day-to-day functioning of the Virology lab seems impossible, atleast to me. They always made sure that no ones work suffer on account of unavailability of any apparatus or labware. Even the smallest of stuff requested from them were arranged without any delay and without having to ask them again. A big thanks to them for a never ending supply of buffers and lab supplies.

Purnima and Tenjin are perhaps the two pillars of Virology Group, always taking care of and managing the lab relentlessly. But to me they have been more than just colleagues, helping me out with my work and boosting my spirit in those low phases with their cheerful words of encouragement. They have always been there with a smile on their faces... no request was ever turned down and no crib ever went unheard with them!! Purnima especially helped me out when I joined the group and taught me the ins and outs of the techniques used in the lab and for that I am indebted to her forever. I also wish to thank Ravi Sir not only for his help with the tissue culture work but also for his constant words of encouragement whenever things went wrong.

A huge thanks to all the past and present members of the Virology Group who in some way or the other contributed to my work and thesis. I have been lucky to have seniors like Rochi, Moin, Kartik, Milan, Handan, Atish, Neta, Vaihlao, Amjad, Anindita, Suman and Kulbhushan who taught me the true essence of research. They have been very good friends and have always helped me with their valuable suggestions. I would especially like to thank Rochi who has been a friend and a guide and has even helped with the proofreading of this thesis. My lovely colleagues deserve the biggest bouquet of thanks for being cheerful and loving, they make the otherwise serious business of science, fun to do. Bhavna, Meenakshi, Grace, Vahid, Pratibha, Shashank, Neha, Shipra, Adarsh, Ekta, Vijaya, Rabbi, Amit, Kirti and Kamran all of you are a pleasure to have around... ever lively and good spirited... you guys keep the ambiance of the lab joyful. I would especially like to thank Bhavna for all her help, jokes and wonderful company.
This acknowledgement would be incomplete without thanking Mamta, Renu, Ankita, Sonali and Nimrata. Rubel and Sonali, two people who helped me with the work presented in this thesis and whose contribution to this work cannot be undermined.

Thanks to all my batchmates for helping me keeping my sanity intact and making this phase of my life unforgettable. From tea time gossips to mutual cribbing sessions ... from movies to day long trips... it’s been a fun filled ride with all of you guys around! I would specially like to thank Assem... now Dr Assem Mishra, for his unrestricted help and valuable suggestions throughout the period of this study.

I am indebted to all my wonderful teachers right from school to Bachelor’s and Master’s who helped shaping me into the person I am today. Though I am not in touch with most of them now but it would be unfair not to acknowledge their contribution in my journey till date.

Nid, Ships, Bhasu, Vid, Tin Tin, and Raksha ... words would fail me if I start to thank you guys. All I want to say is ....you guys rock!!

Ma, Papa, Karu and Deepu... I will not thank you guys ...simply because nothing I say can measure up to the unconditional love and support you extend to me inspite of all my eccentricities. Without you... I would be nothing!!

Finally, I would like to acknowledge Microsoft Corp. for making MS Office package, Google Inc. for the Google search engine and to National Library of Medicine (NLM) and National Institute of Health (NIH) for giving us www.pubmed.gov. I honestly cannot imagine working without these three lifelines.

Last but not the least, many have not been mentioned but none is forgotten.

Namita Satija
