Acknowledgement

Any accomplishment requires the efforts of many people and this work is no exception. First of all, I bow my head with great respect to “Waheguru” with whose grace it became possible for me to complete my work.

I take this opportunity to express my sincere thanks and deep sense of gratitude with pride, as it has been my privilege to work under the noble guidance and stewardship of my supervisor, Dr. Vasudha Sambyal, Reader and Head, Guru Nanak Dev University, Amritsar. Her dexterous guidance, constant encouragement and affection instilled in me the confidence to carry out this study. This work would not have reached its meaningful conclusion without her able supervision.

I also feel honored to express my profound regard and deep sense of gratitude to my Co-supervisor, Dr. Sharda Sidhu, Professor, Department of Human Genetics, Guru Nanak Dev University, Amritsar. Her immaculate guidance, perceptive and constructive criticism and benevolent attention have gone a long way in enabling me to pursue the work presented in this thesis.

I extend my thanks to Dr. Baddarudoza for guiding me throughout the statistical analyses task. I also thank Prof. Dr. A.J.S. Bhanwer, Dr. Gursatej Gandhi, Dr. Kamlesh Guleria and Dr. Manpreet for their valuable suggestions and affection. The timely help rendered by non-teaching staff, Department of Human Genetics, is highly acknowledged.

My heart filled gratitude to my friends and colleagues Navdeep, Tejbir, Dr. Batra, Shivani, Basanti, Surabhi, Prabjot di, Kanwal di, Mrs. Rajni Khanna, Radhika, Kapila, Akbar, Naresh, Taran, Raman, Sandeep and others missing in my memory at the moment, for their kind and cheerful company and full cooperation to complete the present study. I am deeply grateful to my all other labmates for their help.

No words can suffice my feelings of gratitude to my revered parents S. Satnam Singh and Manmohan Kaur and parents-in-law. S. Paramjeet Singh Kohli and Tejinder
Kaur who are my pillars of support, my source of strength and inspiration. Their infinite love, supreme sacrifice, heartfelt blessings, immense patience and understanding have made me able to achieve this another task of my life.

I render myself short of words while expressing my gratitude to my husband Harsimran Singh whose love, support and encouragement has helped me to achieve this goal. Without his patience, valuable guidance and assistance it would have been impossible for the present study to see the light of the day. He always carried away my worries and propped me up in the moments of despair. I also fondly wish to mention the love of my daughter Rabnoor who always boosted me up to complete the study in time through her kidding deeds.

I feel highly pleased to acknowledge the love of my brother Aranjit, brother-in-law Angad and all my cousins whose good wishes and encouragement have come a long way during the whole program of my work. I am also grateful to my Taya ji, Tayi ji, Chachi ji and all other family members for their support and good wishes.

I am also thankful to Dr. Puneet Arora, Dr. A.P. Singh and Dr. Guruwinder Singh for their help and cooperation in collection of patient samples. I convey my sincere thanks to all subjects who participated in my study; without them the study would not have been possible.

I gratefully acknowledge the financial support from the Council of Scientific and Industrial Research (CSIR Award No: 09/254 (0162)/2006-EMR-I) for undertaking the present study.

HARSIMRAN KAUR
