Acknowledgements

During the conduct of my research work and in the subsequent preparation of this thesis, I received unstinted support from several people, individually and collectively. I take this opportunity to express my gratitude to each one of these individuals who made it possible for me to complete this seemingly gigantic task.

First of all, I would like to place on record the tremendous help and motivation I received from my thesis advisor, Dr. Atul Khanna. His enthusiastic support, constant encouragement, advice and above all his vast experience and expertise constantly guided me throughout this research project.

Several distinguished academicians from foreign universities provided critical help in various measurements and analysis of my samples. In particular I would like to thank Prof. J.W. Zwanziger from the Department of Chemistry, Dalhousie University, Canada and Dr. Scott Kroeker, Department of Chemistry, University of Manitoba, Canada for carrying out MAS-NMR measurements. I thank Professor Fernando Gonzalez, Department of Inorganic Chemistry from the University of Cantabria, Spain for DSC analysis of the samples. I thank all faculty and staff of the Department of Applied Physics and University Science Instrumentation Centre (USIC) for continuous support and encouragement.

My colleagues and friends at the “Sensors and Glass Physics Laboratory” provided a pleasant and congenial atmosphere at our workplace. My sincere gratitude and appreciation goes to my labmates: Ms. Anu Bajaj, Ms. Priyanka Nayar and Ms. Arshpreet Kaur and to my friends Mr. Boor Singh, Mr. G. Lakhsminarayana and Ms. Sandeep Kaur for their consistent cooperation and moral support during my research work.

I will be failing in my duty if I do not mention the constant inspiration and affection that I received from my parents, Mr. Surinder Singh and Mrs. Baljeet Kaur as well as from my sisters, Ms. Kamal Preet and Ms. Rupinder Kaur. The completion of this thesis would not have been possible without their unflinching encouragement and assistance.
Last but not the least, my sincere gratitude goes to my husband, Mr. Arvinder Singh Saini who provided special motivation and inspiration and allowed me to concentrate on my research work. In this regard I must also acknowledge the role of my son, Tejasveer Singh Saini who willingly permitted me to devote my time and energy towards the completion of this thesis.

Last but not the least I thank the Almighty God for showering blessings on me and for having given me courage to complete so many formidable tasks.

Aman Preet
