

List of Tables

3.1	The calculated formation energies (in hartrees) of the N^{q+} atomic ions	43
3.2	Theoretically calculated values of KER in case of N_2^{q+} ($3 \leq q \leq 6$) dissociating to the lowest possible states of $N^{m+} + N^{n+}$ with $m+n=q$. These values denote the upper limit of the KER. (see text)	45
3.3	The calculated formation energies (in hartrees) of the C^{q+} and O^{q+} atomic ions	48
3.4	Theoretically calculated values of KER in case of CO^{q+} ($4 \leq q \leq 6$) dissociating to the lowest possible states of $C^{m+} + O^{n+}$ with $m+n=q$. These values denote the upper limit of the kinetic energy release (KER).	49
4.1	This table shows the KER values obtained for the various fragmentation channels $N^{r+} - N^{s+}$ in N_2 fragmentation induced by ion impact. The values calculated from pure Coulomb explosion model are also included.	54
4.2	Theoretically calculated values of KER in case of N_2^{q+} ($3 \leq q \leq 6$) dissociating to the lowest possible states of $N^{m+} + N^{n+}$ with $m+n=q$. These values denote the upper limit of the KER.	55
4.3	The possible molecular states of N_2^{2+} dissociating into $N^+(^3P) + N^+(^3P)$ along with the theoretically calculated values of KER taken from reference [4]	56
4.4	Results of theoretical calculations for N_2^{3+} dissociation taken from reference [6]	57

5.1	Observed most probable values in the KER spectra for the various fragmentation channels $C^{r+} - O^{s+}$ in CO fragmentation induced by ion impact. The values calculated from pure Coulomb explosion model are also included.	74
5.2	The possible molecular states of CO^{3+} dissociating into $C^{2+} + O^{+}$ along with the theoretically calculated values of KER [14]	76
5.3	The possible molecular states of CO^{4+} dissociating into $C^{m+} + O^{n+}$ ($m + n = 4$) along with the theoretically calculated (UHF calculation) values of KER	78
5.4	The possible molecular states of CO^{5+} dissociating into $C^{m+} + O^{n+}$ ($m + n = 5$) along with the theoretically calculated (MP2 calculation) values of KER	80
5.5	The possible molecular states of CO^{6+} dissociating into $C^{m+} + O^{n+}$ ($m + n = 6$) along with the theoretically calculated (UHF calculation) values of KER	82
