# List of Tables

1.1 Alternative cellular functions of aaRS and aaRS-like proteins in eukaryotic cells  
1.2 The classes and subclasses of aaRSs  
1.3 Principal features of the two classes of aaRSs  
1.4 Editing domains of Class I and II aaRSs  
2.1 Compounds used for the refinement of crystallization condition  
2.2 Details of initial screening of soaking Pab-NTD crystals for heavy atom derivatization  
3.1 dtb hardware components  
3.2 Soaking conditions for the heavy atom derivatized crystals used for the collection of complete data set  
3.3 Essential crystallographic data and details of the data collection for Pab-NTD derivatized crystals  
3.4 Essential Crystallographic data for Pab-NTD and Pab-NTD-L-serine complex  
4.1 Positional coordinates of all heavy atom site given by ‘SOLVE’  
4.2 Phasing statistics for the various heavy atom compounds  
4.3 Figure of Merit (FOM) of the phasing solution given by ‘SOLVE’  
4.4 Z-scores for the Patterson cross-validation, difference Fouriers analysis of the native Fourier, figure of merit and overall scoring given by ‘SOLVE’  
4.5 Refinement steps of Pab-NTD showing convergence of R-factor at different steps of refinement  
4.6 The Rotation solution and Translation solution of Pab-NTD-L-serine complex as given by MOLREP  
4.7 The Refinement steps of Pab-NTD-L-serine complex showing convergence of Rfactor after different steps of refinement  
4.8 The summary of refinement statistics for Pab-NTD as well as Pab-NTD-L-serine complex  
5.1 The DALI output  
6.1 List of amino acids tested in fluorescence based binding experiments for wild type Pab-NTD as well as their mutants
