ACKNOWLEDGEMENTS

The five years of research experience at the National Institute of Immunology along with its picturesque landscape have been a memorable period in my life. Dr Om Singh my Guide first and foremost has been a source of strength during tricky situations. I have benefitted greatly from his knowledge and experience. This thesis would not have been possible without his encouragement and constructive criticism. My humble respects go out to him.

I have been fortunate to have been associated with Prof GP Talwar whose enthusiasm and never ending drive for work were a constant reminder to push forward with renewed vigour.

It has been a pleasure working with Dr Rahul Pal - a friend and an intelligent lab co-worker bubbling forth with fresh ideas. Always willing to help, his rare sense of humour helped diffuse many a tense situation in the lab.

I am grateful to Dr S Chandrasekhar for initiating me to vaccinia biology; to Dr Asok Mukhopadhyay for raising bulk scale cultures of the viruses; to Dr Sudhanshu Vrati for letting me use the tissue culture facilities in the Virology lab. Thanks are due to my lab mates - Adarsh, Subeer, Aparna, Sutapa, Kanchan, Ram Singh, Dayanand, Ramesh, Ashok, Kailash, Awantika, Deepti and Manju for helping me out in lab work.

I owe a great deal to Mr Akhilesh K Aggarwal and Girish for smoothening out official procedures; to Anjali for helping in graphic layouts; to Gopal for preparing the photographs; to Babulal for xeroxing; and to Satish for final compilation of the thesis on time.

Financial support of CSIR is gratefully acknowledged.

All the members at RSH, Pyar Singh Ram Singh, Darban Singh, Jawahar and Chattar Singh have cooperated in various ways and provided a lively atmosphere in the hostel.
