# Contents

Chapter 1: Introduction ................................................................. 1  
1.1 Motivation and Objective.......................................................... 2  
1.2 The Heart of the Problem ............................................................. 4  
1.3 Thesis Goals ............................................................................. 5  
1.4 Approach ..................................................................................... 6  
1.5 Contribution ............................................................................... 6  
1.6 Thesis Organization ................................................................. 7  

Chapter 2: Component Based Software Engineering: A state of Art..... 11  
2.1 Scope and Goal ........................................................................... 11  
2.2 Software Engineering ................................................................. 12  
2.2.1 Software Development Life Cycle ........................................... 14  
2.2.2 Life Cycle of Various Paradigm .............................................. 15  
2.3 Software Reuse .......................................................................... 18  
2.3.1 Classification of Reuse ............................................................. 21  
2.3.2 Software Reuse Attraction ...................................................... 24  
2.3.3 Software Reuse Standardization ............................................. 25  
2.3.4 Barriers in Software Reuse ..................................................... 25  
2.4 Component Based Software Engineering ...................................... 27  
2.4.1 The Evolution of Software Component ................................... 27  
2.4.2 Software Component Definition ............................................ 27  
2.4.3 Component Resources ........................................................... 29  
2.4.4 Overview of Component Based Software Engineering... 29
4.9 ULCM: Umbrella Life Cycle Model ........................................ 117
  4.9.1 Component Based Approach ........................................ 117
  4.9.2 A Software Development Life Cycle Model ...................... 118
  4.9.3 Component Based Software Reuse Approach ...................... 119
  4.9.4 Step Involve In Component Based Software Life Cycle.. 119

Chapter 5: Component Retrieval Using Genetic Algorithm........... 124
  5.1 Scope and Goals ..................................................... 125
  5.2 Principle of Component Retrieval ................................. 126
  5.3 Criteria of Component Retrieval ................................ 130
  5.4 Retrieval Query of Component .................................... 131
  5.5 Component Selection Strategies ................................... 132
  5.6 Prerequisite for Component Retrieval ............................ 134
  5.7 Existing Component Retrieval Strategies ......................... 135
    5.7.1 OTSO Method................................................ 136
    5.7.2 PORE Method .............................................. 136
    5.7.3 CRE Method ............................................... 137
  5.8 Component Retrieval Process ...................................... 139
    5.8.1 Component Retrieval Implementation through XML .. 142
    5.8.2 Genetic Algorithms Procedure for Component Retrieval 146
      5.8.2.1 Genetic Algorithms .................................. 148
      5.8.2.2 Algorithm for component Selection.............. 149
      5.8.2.3 Genetic Algorithm Implementation for Component Selection ................. 150
      5.8.2.4 Binary coded GA ..................................... 151

ix
Chapter 6: Security Assurance in Component Based Software Systems

6.1 Scope and Goals
6.2 Security Assurance Paradigm
6.3 Security Assurance Terminology
   6.3.1 Security
   6.3.2 Certification Process of a Component
6.4 Security Measurement of Component Based Software System
   6.4.1 Security Policy in CBSS
      6.4.1.1 Atomic Level Security
      6.4.1.2 Compositional Level Security
      6.4.1.3 Systems Level Security
6.5 Digital Signature in Component Based Software
   6.5.1 Cryptosystem
   6.5.2 Digital Signature in Component based systems
   6.5.3 Digital Signature Schema Implementation Using XML Modeling
6.6 Intra Component Security Certification
   6.6.1 Certification Algorithm
   6.7.2 Algorithm: Certification Driver
   6.7.3 Security Metric
Chapter 7: Quality Verification and Predication

7.1 Scope and Goal

7.2 Validation and Verification

7.2.1 Software Testability Concepts

7.2.2 Testing Objectives

7.2.3 Goals of Testing

7.2.4 Testing Classification

7.2.5 Issues and Challenges of Testing CBSS

7.2.6 Testing in Component Based Software Development

7.2.6.1 Testing Elements

7.2.6.2 Component Based Software Testing Framework

7.2.7 XML Modeling

7.3 Reliability of Component Based Software Systems

7.3.1 Present Perspective

7.3.2 Prerequisite for Component Based Software Reliability Estimation

7.3.3 Reliability Models Assumptions

7.3.4 Pre existing Reliability Models Classification

7.3.5 Reliability Engineering
7.4 Why Formal Approach Require ........................................ 216

7.4.1 System Reliability Detection Techniques Approach........ 218

Chapter 8: Conclusion and Future Works.......................... 232

Reference ........................................................................ 236
