Acknowledgements

In my dictionary I have put the synonym for ‘Patience’ as ‘Vasu’. I wonder how he got that much. Vasu never worries for anything but perfection. Whether it is experiment or writing thesis, he likes things to be simple and clear, without any ambiguity. (I really wonder how he had borne with me, basically an impatient one.) Many a times, during discussions, when I talk non sense in a hurriedly manner and impossible things (may be more ambitious), he made me to feel the reality and corrected me by his patience. He had spent a lot of time with me, both in the lab and office room, in spite of his busy schedule. His friendly and careful approach always made me to feel safe and pleasant. I should say that I was very much lucky to have Vasu as my guide. I doubt whether I could thank him enough.

Vinay! my sincere thanks to this sincere person. He likes to be in tension always(!?l). But whenever I had problems in the experiments, I rushed to his room and at all the times, with a smiling face he took my tensions to his shoulders. I never felt I am helpless in the lab, even to shift the whole experimental setup (which I happened to do two to three times!) or to carry gas cylinders!, apart from aligning, data recording and discussing about them. Vinay was always there with me.

Ranjana’s help in getting my experiment going could not be put in words. Her experience in IPR for setting up and running of experiments is incredible, which she shared with at any time I wanted, without even very small hesitations. I am still searching ways to thank her. Maqbool, an enthusiastic person, always encouraged me in all the fronts. His help in taking photos of the discharges and experimental setup will have to be acknowledged.

Mukherji! I think that, had I not met this guy during my course work days, I would have given up doing research long time before. His briskness (with his bulky body ?!?) and thinking in ‘real’ terms has thrown light many a times, while I was in dark. As long as I am with science I will remember him.

Sanjay Kulkarni, I believe that he has given his hair to electrical discharges! His knowledge with discharges is enormous which he shares with others eagerly. I am lucky to have him so rear. I thank Sanjay for his help to understand the electrical characteristics part of this work.

I thank Hari, who was (and I think he is and will be!) with me from the course
work to the final presentation of thesis, always with a moral support.

Shashank, an enthusiastic teacher, friend, opponent (in Badminton court), is really a role model. I acknowledge his help in this work to understand the voltage and current curves.

I also thank Prof. P.I. John, Prof. A. Shyam, Dr. Govind for their valuable suggestions and support for this work.

I thank the academic committee of all the tenures I met for their suggestions and help for this work to get completed.

Sathya and Varatha have helped me a lot in understanding the high voltage power supply and measuring the current and voltage with a feeling about what is being done. I thank them.

Venkat and Deepak have helped a lot more in bringing up the experimental setup and also shed much light to prove my basic knowledge about discharges (and of course, how to beg, borrow and steal things required for the experiment). Their company in the work and in the hostel had also to be appreciated.

I thank Sangeeta, Ganesh Monojoy and Dastgeer for their help in all the computer related works. I thank Dr. Ajai kumar, Dr. C. V. S Rao, Dr. R. Jha, Dr. P. Ranjan, Mr. Atrey, Gupta ji, Panchal, Chayya and all other ADITYA team who made my experience with ADITYA enjoyable.

I thank Manoj, Awasthi, Shankar, Sunil, Sriram, Santosh, Sumod, Sunil Belzare, KVANPS Kumar, AV Ravikumar, Mohandas, Saratha, Raj Singh, Acharya, Jadeja, Gandhi, Vikhola and many others who helped during the course of the experiment.

I thank all the library staff, in particular, Mrs. Pathak, Das madam, Amola, Anjila and Saroj for their prompt help whenever needed.

My sincere thanks to all the staff in the computer center. I also thank all staffs of the administration, purchase, store and accounts. Especially for Pandya of stores who helped in procuring Nitrogen cylinders at the needy times.

I thank RSingh, Avinash, Shishir, Srivatsan, Amita, Govind, Mayya, GP for the discussions at various times.

I am indebted to Devendra, Priyanka and Rachna for their contributions in teaching me the 'spoken hindi' which has really helped me staying in both IPR and Hostel.
I was very lucky enough to have friends Rajiv, Ramana, Aniruddha, G.Ravi, Chirag, Tripathi, Shantanu, Saji nair, Ashwini, Sambaran, Anuj, Shakid, Vipin, Veeresh, Kala, Jyotirmoy, Varun, apart from Raghu anna, Harish, Kumbhare who made the stay at IPR as well as Hostel, pleasant and I thank all for the many a lot discussions about all the possible topics, we had at time to time.

The company of Shaktivel, Poonam, Aditya, Madhavan, Kundu is a remembering one.

I also thank all the senior RSs (who became the founder members of the SST Project) and all the TTPs, who gave me a good company during their one year stay at Hostel, during my stay there.

The friendly hand by Ravi prakash and Shaktivel is indebted. I sincerely thank their help in all the means.

Once again I specially thank Aniruddha and Aditya for their help in proof-reading this thesis.

I have no words or ways to thank my Appa and Amma, whose constant encouragement for my work to be going all along. Also I won't be doing justice if I merely thank to all other family members Mari, Thangam, Shanthi, Pattu Aachi, Malliga Auntie.

At last my half-heart, Sudha, never made me to feel uneasy for anything. At all the times she took the pain, relieving me from that and was encouraging me, always, with a smile.

Let God Bless them all!

NARAYANAN RAMASUBRAMANIAN
