ACKNOWLEDGEMENTS

Since the research scholar ventured this study on a large scale, he came across many hardships. He could have easily cut down the number of treatments and the number of subjects to make the study more simple. However, the desire to unearth new findings in this controversial area of warm-up prevailed. Finally 240 subjects had to undergo through the 36 treatments followed by testing in three basic motor variables. Thus, throughout the study, the scholar needed assistance and cooperation from different authorities and colleagues.
