List of Tables

3.1 SM matrix elements $\langle (\frac{3}{2})^2 J T \mid V \mid (\frac{3}{2})^2 J T \rangle$ ........................................ 49

3.2 $\langle T^2 \rangle$ values and eigenenergies of the relevant eigenstates of the $^{44}Ti$ Hamiltonian. For comparison, we have also tabulated the SM ($T=0$) eigen energies published by Skouras et al. (1990). ........................................ 65

3.3 $\langle T^2 \rangle$ values and the eigenenergy values of some low-lying eigen states of $^{20}Ne$ IBM-2 Hamiltonian with the corresponding SM ($T = 0$) energies. 66

3.4 Eigenenergies and $\langle T^2 \rangle$ values of some low-lying eigenstates of $^{60}Zn$ sdgIBM-2 Hamiltonian with the SM energies for $T = 0$. ............. 67

4.1 $J=2$ IBM-2 Eigenstates. ........................................ 80

4.2 $J = 4$ IBM-2 Eigenstates. ........................................ 81

4.3 Adopted SDI strength Parameters for $^{96-108}Mo$ isotopes. .......... 82

4.4 The neutron and proton model spaces for $^{146-154}Sm$ and the s.p.e. ... 87

4.5 Occupancies of the neutron s.p. orbits in $Mo$ isotopes. ............... 94

4.6 Occupancies of the proton and neutron s.p. orbits in $Sm$ isotopes. ... 95

4.7 Choice of the free fermion input parameters ............................ 96
4.8 $B(E2)$ values in units of $e^2b^2$ for $^{148}\text{Sm}$. The "Ex" and "ND" values are taken from Navrátíl and Dobeš (1991). The static quadrupole moment $Q_{21}$ in barns ($b$) of the $2_1^+$ level is also tabulated.

4.9 $B(E2)$ values in units of $e^2b^2$ for $^{150}\text{Nd}$. The experimental (Ex.) and ND (sdg)-values are from Navrátíl and Dobeš (1991).

4.10 $B(E2)$ values in $e^2b^2$ for $^{152}\text{Sm}$. For comparison we have also tabulated the experimental (Ex.) and calculated values of Kumar (1974).
