Acknowledgements

My PhD research has been a humbling and learning experience. The whole process of designing a study, undertaking field research, compiling and analyzing data, interpreting results and writing up has been an eye opener. During this process, I have understood the nuances of carrying out a scientific investigation and more importantly, I have realized various unknown facets of my own personality. Thanks to this process and the rigor with which it is followed; this learning will remain in the rest of my life, helping to do things better and better.

My PhD work I think is a collective effort of many people and I am obliged to all of them for allowing me to build on their work. Without their selfless efforts and unflinching support this work would have been impossible.

I am grateful to my supervisor Dr. Ullas Karanth who has shown great patience in dealing with my amateurish approach to science. He has been an ardent champion of science-based conservation and has been fighting with the system for instituting scientific monitoring of biodiversity for effective conservation. His vision to expose officers of Indian Forest Service to the art of scientific conservation brought me under his wings. I gratefully acknowledge Dr. Karanth who provided me freedom to think, experiment and explore opportunities to learn new advances in conservation science. I am not sure if I
have met his expectations, but his motivation and encouragement has been vital to complete my thesis. The experience I gained during my field research work helped me design and execute state-of-the-art surveys for large mammals in large swaths of forests in Sumatra, Indonesia. I wholeheartedly thank Dr. Ullas Karanth for the training he gave me to become a better forest officer.

I also acknowledge my co-supervisor Dr. Anindya Sinha, who has been very supportive right from the beginning. His inputs especially during my synopsis and thesis writing stage have been very crucial.

I acknowledge the overwhelming contribution of Sri. Samba Kumar to my PhD work. It is not an exaggeration, if I could put on record that without his help and support, my work would never have reached a logical conclusion. He is very meticulous and a task master. He helped me in all aspects of my work, including design, data collection, and analysis and writing that greatly helped in completing my thesis. Intellectual discussions about theory and practice of biodiversity monitoring helped me improve my technical capabilities.

I am highly indebted to Dr. Jagdish Krishnaswamy for his invaluable contribution and support to data analysis. His knowledge and experience helped me understand various concepts of biostatistics and landscape ecology.

I earnestly thank Government of Rajasthan and Forest Department of Rajasthan, for granting me study leave to pursue my PhD aspirations. I thank
Government of Karnataka and its Forest Department for providing necessary permissions to conduct field studies. Indira Gandhi National Forest Academy and Wildlife Institute of India provided initial training in basics of forestry and wildlife management.

I thank Centre for Wildlife Studies (CWS) for their institutional support to my field work, logistics and data analysis. CWS is a pioneer institution, probably the best in the country, for science based conservation. When majority of NGOs are swayed away by ‘populist’ conservation approaches, CWS was rooted in ground realities and championed for evidence-based conservation approach. Its belief in science-based approaches for wildlife conservation with an emphasis on field biology, its crusade to train generations of students in conservation biology, and its willingness to help government in conservation efforts –are all truly laudable. This PhD provided me an opportunity to be a part of this great team, and I am indebted to CWS. I also thank Wildlife Conservation Society – NY and its India program office for providing me with initial funding support, and working space during thesis-writing. I thank Mr. K.V. Phaniraj for providing me best administrative support during seven years of my PhD work.

I am grateful to US Fish and Wildlife Service for their generous funding support for the fieldwork. I am thankful to Manipal University for enrolling me as a doctoral candidate and for all the administrative support. Due to my World
Bank assignment with Aceh Forest & Environment Conservation project, I had to seek an extension of time to submit my thesis and the University graciously acceded to my request. Leuser International Foundation (LIF), Indonesia allowed me to go on leave to complete my thesis writing.

Field work was the most challenging task as terrain and local conditions were new to me. I am indebted to my field assistant Mr. M.H. Shankara who besides being an excellent ethno-botanist was also a good cook and an extremely resourceful person to solve any local problems. I also thank Mr. M.N. Santosh and Mr. C.U. Santosh, my two other field assistants who helped me in all aspects of my field work. College of Forestry, Ponnampet provided me field equipment and local support, including deputing their students for participating in field surveys. I thank Dr. C. G. Kushalappa for his help and local support. I gratefully acknowledge Prof. Sadananda and Mr. Sampat Kumar for helping me with plant identification. I would like to specially thank all the volunteers who helped me in my field surveys.

Mr. V. Srinivas of FERAL taught me basics of GIS and helped me with vegetation data analysis. Dr. Ajit Kumar allowed me to attend a few of the MSc classes to learn many concepts that I was completely unfamiliar with. He also dealt with all administrative matters related to my PhD work. Mr. Sanjay Gubbi shared his experiences of community participation in conservation and discussed issues of biodiversity conservation in India. Mr. D.V. Girish
participated as a volunteer in field surveys and enthusiastically shared his knowledge. Dr. Krithi Karanth reviewed my drafts of synopsis and thesis chapters and provided useful suggestions and references. Mr. Arjun Gopalaswamy helped me in developing study design, Mr. Narendra Patil, Mr. Raghavendra Mogaroy, Mr. Vishal Gokhale, Mr. Kiran Yadav and Mr. Nishant provided admirable help and support during final stages of data analysis and writing. Mr. Santosha Gubbi helped me as a field volunteer before joining IFS and later assisted me in plant identification and vegetation data analysis. Mr. Avneesh Makkar and Mr. Suresh Jone motivated me and provided useful support. Dr. Kartik Shanker provided useful tips for analysis and helped me with valuable references. All these friends were a constant source of motivation to complete my work and I sincerely thank them.

I thank Ms. Bina Kak, the Hon. Minister of Forests, Rajasthan for issuing necessary permission for my study leave. I am obliged to Mr. R. G. Soni, Principal Chief Conservator of Forests, Rajasthan for encouraging me to pursue my ambition of working for a Ph D. I am also grateful to Mr. Salauddin Ahmad, Chief Secretary, Government of Rajasthan, who is one of the finest administrators besides being very passionate about wildlife conservation, for encouraging me to go on study leave. I sincerely thank Late Mr. Fateh Singh Rathore and Mr. Valmik Thapar, two enthusiastic and well known tiger experts, who showed great enthusiasm in my work and always supported me. They both
taught me many practical aspects of conservation during my tenure in Ranthambhore and inspired me to do my PhD. I am influenced by their relentless, untiring efforts to conserve beleaguered wildlife. I thank Mr. P. S. SomaSekhar, my colleague in Indian Forest Service in Rajasthan cadre for taking care of all my administrative issues. I also thank Mr. B.L. Upadyaya who worked hard to get my permission letters issued at various government levels.

I personally thank Mr. Chakrabarthy the then Chief Wildlife Warden, Karnataka who issued research permits to start my work in Nagarahole; Mr. Anur Reddy for providing me with required support; Dr. Raju, Mr. Kumar Pushkar for providing support in field. I thank Mr. Vegus ACF who mobilized support to establish my filed station and taught me techniques of Pranayama. I thank Mr. Sunder Shetty, RFO, Thithimathi, Mr. Sanjeeva RFO, Research, and Mr. Kumar Swamy, for providing essential facilities in my base camp.

I thank Mr. Pak Jamal Gawi, Chairman, Leuser International Foundation and Mr. Lars Gunnar Blomkvist, AFEP, Indonesia, Project Leader who were both always supportive of my work and encouraged me to complete my thesis.

I am bereft of words to express my deep appreciation for the warmth and relentless support of following colleagues and friends who shared their wildlife knowledge with me: Mr. K.M.Chinnapa, Mr. Praveen Bhargav, J.

I thank my brother Dr. G. Jaya Chandra Reddy and his wife Mrs. Radhamma; my sisters and their families, Ms. Uma, Ms. Neeraja, Mr. B.S.Reddy, Lt. Col. N. Manohar Reddy; my parent-in-laws Mr. Pulla Reddy and Mrs. M. Sarojamma; my brother-in-law Dr. Rama Subba Reddy and his wife Ms.Prameela; Dr.Narsi Reddy and Ms.Anuradha for their encouragement.

My special thanks to my brother-in-law Mr.Srinivasula Reddy and his wife Dr. Sailaja Reddy for taking care of my logistics in Bangalore and more importantly for providing emotional support when I needed the most. I am impressed and motivated by Dr. Sailaja Reddy who is doing a commendable job as a doctor and also taking excellent care of the family members including guests like me. Both Ch. Yudhister and Ch. Yashwant shared their resources with me, sacrificed their own comfort and made me feel at home.

The entire credit for completing my thesis should go to my wife Ms. G. Shobha Reddy. During my field work and my subsequent stint in Indonesia, she took full responsibility of raising my two sons and in some sense relieved me from my parental obligations. She bore the brunt of my absence from home and provided me opportunity to do my fieldwork. Her ability to analyze complex
issues and provide tactical solutions, her perseverance and guidance helped me stay on course, complete my thesis and fulfill my dreams. I also attribute my success to my two sons, Ch. Anurag and Ch. Goutam, for their understanding and support. Both of them excelled in their studies and eased my responsibility.

Finally, I am indebted to my mother Late Mrs. G. Nagarajamma and father Mr. G.S. Raja Reddy for giving me the best opportunity to pursue my higher studies. I am deeply influenced by their humble life and ideals. I owe everything to them, including this thesis.
