TABLE OF CONTENTS

ABSTRACT .......................................................................................................................... 6
ACKNOWLEDGEMENT ........................................................................................................ 8
1-INTRODUCTION .............................................................................................................. 9
  1.1-WORK-RELATED MUSCULOSKELETAL DISORDERS .................................................. 9
  1.2-WORK-RELATED MUSCULOSKELETAL DISORDERS IN INDIA .................................. 12
  1.3-WORK-RELATED MUSCULOSKELETAL DISORDERS IN STONE INDUSTRY ............. 14
  1.4-INVESTIGATING WRIST PAIN IN STONECUTTERS .................................................. 16
2-AIMS OF THE STUDY ...................................................................................................... 18
3-REVIEW OF LITERATURE ............................................................................................. 19
  3.1-SEARCH STRATEGY ..................................................................................................... 19
  3.2-NORMATIVE DATA FOR GRIP STRENGTH, PINCH STRENGTH AND WRIST PASSIVE RANGE OF MOTION ................................................................. 20
  3.2.1-Normative data for grip strength and pinch strength .................................................. 20
  3.2.1.1-Normative values .................................................................................................. 20
  3.2.1.2-Testing position ................................................................................................... 25
  3.2.1.3-Instruments ......................................................................................................... 26
  3.2.1.4-Effect of factors on grip and pinch strength ......................................................... 26
  3.2.1.5-Summary ............................................................................................................. 27
  3.2.2-Normative data for wrist range of motion ................................................................. 28
  3.2.2.1-Normative values ................................................................................................ 28
  3.2.2.2-Reliability of wrist range of motion measurements using a goniometer .......... 29
  3.2.2.3-Other instruments .............................................................................................. 30
  3.2.2.4-Summary ............................................................................................................ 30
  3.3-STRUCTURE AND FUNCTION THE WRIST COMPLEX ............................................ 31
  3.4-RISK FACTORS FOR WORK-RELATED MUSCULOSKELETAL DISORDERS OF THE WRIST .......................................................................................... 31
  3.4.1-Intrinsic risk factors ............................................................................................. 32
  3.4.1.1-Osseoligamentous structures .............................................................................. 32
  3.4.1.2-Tendons ............................................................................................................. 32
  3.4.2-Work tasks and biomechanical risk factors ............................................................... 34
  3.4.3-Organisational and Psychosocial factors ................................................................. 35
  3.5-WORK-RELATED MUSCULOSKELETAL DISORDERS CAUSING CHRONIC WRIST PAIN .............................................................. 36
  3.5.1-Musculotendinous disorders .................................................................................... 38
  3.5.1.1-De Quervain’s disease ....................................................................................... 39
  3.5.1.2-Intersection syndrome ...................................................................................... 40
  3.5.2-Osseous disorders .................................................................................................. 41
  3.5.2.1-Kienböck’s disease ......................................................................................... 41
  3.5.2.2-Lunate cyst and scaphoid changes .................................................................... 43
  3.5.3-Fractures ............................................................................................................... 43
  3.5.4-Ganglion cyst ........................................................................................................ 44
  3.5.5-Instability ............................................................................................................... 44
  3.5.5.1-Distal radioulnar joint subluxation ...................................................................... 45
  3.5.5.2-Triangular fibrocartilagenous complex injury ..................................................... 45
  3.5.5.3-Ulnar-impaction syndrome .............................................................................. 46
  3.5.5.4-Carpal instability: Scapholunate dissociation ....................................................... 47
  3.5.5.5-Carpal instability: Lunotriquetral instability ....................................................... 48
  3.5.6-Osteoarthrosis ........................................................................................................ 48
  3.5.7-Senosirineurral and vascular syndromes ................................................................. 50
  3.6-LATERITE AND GRANITE QUARRYING AND OTHER TYPES OF STONEWORK ...... 51
  3.6.1-Laterite stone and its cutting ................................................................................... 51
  3.6.2-Granite stone and its cutting .................................................................................. 53
  3.7-WORK-RELATED MUSCULOSKELETAL DISORDERS OF THE WRIST IN STONECUTTERS .............................................................. 54
  3.8-RESEARCH QUESTIONS ............................................................................................ 57
4-OBJECTIVES OF THE STUDY ............................................................................................................. 58
5-MATERIALS AND METHODS ............................................................................................................. 59
  5.1-ETHICAL APPROVAL ...................................................................................................................... 59
  5.2-METHODS .................................................................................................................................. 60
    5.2.1-Phase I-Establishing norms for hand function (grip strength, pinch strength and wrist
    passive range of motion) ......................................................................................................................... 60
      5.2.1.1-Study design .......................................................................................................................... 60
      5.2.1.2-Population .............................................................................................................................. 60
      5.2.1.3-Sampling method .................................................................................................................... 61
      5.2.1.4-Sample size ............................................................................................................................ 61
      5.2.1.5-Subjects .................................................................................................................................. 62
      5.2.1.6-Inclusion criteria ...................................................................................................................... 62
      5.2.1.7-Exclusion criteria ..................................................................................................................... 62
      5.2.1.8-Tester ...................................................................................................................................... 62
      5.2.1.9-Instruments ............................................................................................................................ 62
      5.2.1.10-Operational definitions ....................................................................................................... 63
      5.2.1.11-Procedure ............................................................................................................................. 63
      5.2.1.12-Grip and pinch strength measurements .............................................................................. 64
      5.2.1.13-Wrist range of motion measurements ............................................................................... 67
    5.2.2-Phase II-Clinical evaluation of wrist in stonecutters to identify those with clinical
    manifestations ........................................................................................................................................ 71
      5.2.2.1-Study design .......................................................................................................................... 71
      5.2.2.2-Population .............................................................................................................................. 72
      5.2.2.3-Sampling .................................................................................................................................. 72
      5.2.2.4-Sample size ............................................................................................................................ 72
      5.2.2.5-Inclusion criteria ...................................................................................................................... 73
      5.2.2.6-Exclusion criteria ..................................................................................................................... 73
      5.2.2.7-Tester ...................................................................................................................................... 73
      5.2.2.8-Instruments ............................................................................................................................ 74
      5.2.2.9-Parameters studied .................................................................................................................. 74
      5.2.2.10-Method .................................................................................................................................. 74
    5.2.3-Phase III-Clinical and radiological evaluation of wrist in symptomatic stonecutters .......... 75
      5.2.3.1-Study design .......................................................................................................................... 75
      5.2.3.2-Sampling method .................................................................................................................... 76
      5.2.3.3-Sample size ............................................................................................................................ 76
      5.2.3.4-Testers ..................................................................................................................................... 76
      5.2.3.5-Method ................................................................................................................................... 76
      5.2.3.6-Ulnar variance ......................................................................................................................... 79
      5.2.3.7-Lunate height .......................................................................................................................... 79
      5.2.3.8-Lunate width ........................................................................................................................... 80
      5.2.3.9-Stahl’s index ............................................................................................................................ 80
      5.2.3.10-Length of 3rd metacarpal ...................................................................................................... 80
      5.2.3.11-Carpal height .......................................................................................................................... 81
      5.2.3.12-Carpal height ratio ................................................................................................................. 81
      5.2.3.13-Scapholunate angle ............................................................................................................... 82
6-STATISTICAL ANALYSIS ................................................................................................................... 84
  6.1-PHASE I-ESTABLISHING NORMS FOR HAND FUNCTION (GRIP STRENGTH, PINCH STRENGTH AND WRIST PASSIVE
  RANGE OF MOTION)............................................................................................................................... 84
  6.2-PHASE II-Clinical evaluation of wrist in stonecutters to identify those with clinical manifestations
  ................................................................................................................................................................. 84
  6.3-PHASE III-ClinICAL AND RADIOLOGICAL EVALUATION OF WRIST IN SYMPTOMATIC STONECUTTERS ........................................ 85
7-RESULTS AND DISCUSSION ............................................................................................................. 86
  7.1-PHASE I-Establishing norms for hand function (grip strength, pinch strength and wrist passive
  range of motion) ........................................................................................................................................ 86
    7.1.1-Grip strength ............................................................................................................................... 86
      7.1.1.1-Effect of side ............................................................................................................................. 86
7.1.2-Effect of gender ................................................................. 87
7.1.3-Effect of age .................................................................. 88
7.1.4-Comparison with available norms ................................... 90
7.1.5-Effect of anthropometric factors on grip strength .......... 93
7.1.6-Developing predictive equations for grip strength using anthropometric factors .......... 94
7.2-Pinch strength ................................................................. 96
7.2.1-Effect of side .............................................................. 96
7.2.2-Effect of gender .......................................................... 97
7.2.3-Effect of age ............................................................... 98
7.2.4-Comparing with previous studies ................................. 98
7.2.5-Effect of anthropometric factors on pinch strength ....... 98
7.3-Wrist passive range of motion ........................................ 99
7.4-Normative values for comparing with stonecutters .......... 101
7.5-Phase II-Clinical screening of stonecutters to identify those with chronic wrist pain .......... 103
7.5.1-Laterite stonework ....................................................... 104
7.5.2-Granite stonework ........................................................ 107
7.6-Screening and selection of stonecutters ............................ 111
7.7-Characteristics of the stonecutters .................................... 112
7.8-Phase III-Clinical and radiological evaluation of wrist in symptomatic stonecutters .......... 116
7.8.1-Demographic characteristics of symptomatic stonecutters ......................................................... 118
7.8.2-Clinical features of symptomatic stonecutters .......... 119
7.8.2.1-Pain ...................................................................... 119
7.8.2.2-Reduced grip and pinch strength ......................... 120
7.8.2.3-Wrist passive range of motion .......................... 122
7.8.2.4-Other clinical features observed in the stonecutters .... 123
7.8.3-Radiological evaluation ................................................. 128
7.8.3.1-Ulnar variance and bone changes ......................... 129
7.8.3.2-Instability ............................................................... 141
7.8.3.3-Triangular fibrocartilagenous complex injury and ulnar impaction syndrome ................. 147
7.8.3.4-Fractures ............................................................... 148
7.8.3.5-Arthrosis ............................................................... 152
7.9-Work-related musculoskeletal disorders identified in stonecutters ....................................... 153
7.9.1-Tendinopathy .............................................................. 154
7.9.2-Instability ................................................................. 157
7.9.3-Deformities ............................................................... 157
7.9.4-Fractures ................................................................ 159
7.9.5-Osseous disorders ....................................................... 159
7.9.6-Osteoarthritis ........................................................... 161
7.9.7-Non-specific wrist pain ........................................... 161
7.9.8-Skin and nail changes ............................................... 162
7.9.9-Disorders ruled out in the stonecutters ...................... 163
7.10-Work-related musculoskeletal disorders of other regions ................................................. 164
7.11-Factors influencing work-related musculoskeletal disorders in stonecutters ......................... 166
7.11.1-Demographic factors .................................................. 167
7.11.2-Biomechanical factors ............................................... 168
7.11.3-Psychosocioeconomic factors .................................... 169
7.12-Preventive strategies ...................................................... 171
7.12.1-Use of protective equipment .................................... 171
7.12.2-Mechanisation .......................................................... 172
7.12.3-Work re-organisation and modification of work culture ....................................................... 173
7.12.3.1-Work regulation .................................................. 173
7.12.3.2-Educating the workforce .................................... 173
7.12.3.3-Creating medical awareness ............................ 173
7.12.3.4-Providing medical and social benefits .............. 174
7.13-Interventions carried-out on the symptomatic stonecutters .................................................. 174
7.8-LIMITATIONS OF THE STUDY .............................................................................................................. 174
7.9-IMPLICATIONS AND RECOMMENDATIONS OF THE STUDY ................................................................. 177
7.10-ACTION PLAN FOR THE STUDY ........................................................................................................... 178
    7.10.1-Short term goals ......................................................................................................................... 178
    7.10.2-Long term goals ......................................................................................................................... 180
    7.10.3-Specific Physiotherapy Measures ............................................................................................... 182

8. SUMMARY AND CONCLUSION .............................................................................................................. 183
