ACKNOWLEDGEMENTS

At first, I acknowledge the Beginning and the End of all things, from whom all blessings flow, the sometime hidden yet eternally revealed God who is not far from each of us, and in whom we live, and move, and have our beings. I thank God for wisdom, knowledge and strength granted to me to bring this study to fruition.

There are many people who I would like to thank for their kindness and support. These few words will not do justice to all those who have made this thesis possible. First, I'm especially appreciative of the association I've had with my advisor Prof. J Behari. I'd like to thank him for the freedom to pursue my research interests down whichever path they take me but always being there to leave the proverbial trail of breadcrumbs to bring me back when I start to go too far off track. The guidance and wisdom that he has shown to me as a mentor I can only hope to emulate when the opportunity presents itself. I appreciate his ability to always look at the question from multiple angles to present a new way of approaching a seemingly impossible task.

The results presents in these pages could not have been achieved without the scientific and social cooperation of Prof. Dr. Takashi Jin, Professor, IFReC, Osaka University, and co-supervisor of my Ph.D. By the grace of almighty, I express my profound sense of reverence of gratitude to him and his group member for his meticulous guidance, congenial discussions, incessant help, calm endurance, constructive criticism, constant encouragement and debonair discussion throughout this investigation right from his lab visit for bioimaging research work to the ship-shaping of the manuscript. Without his help and guidance, it was impossible to do imaging study using the excellent QDs.

I also express my sincere thanks to Dr. Paul Raj from JNU, SES and Dr. T Watanabe, Dr. F. Fujii, from IFReC, Osaka University and Dr. S-I Tanaka from
Frontier School of Bioscience, Osaka University for research discussion and scientific contribution. The co-operation of these peoples cannot be forgettable for final shape of this work. I also thank other entire JNU staff of the School of Environmental Sciences and Advance Instrumentation Research Facility for their unforgettable cooperation in pursuit of this study.

No word will suffice to explain the immense help, cooperation and fortitude by all seniors specially Shibaji and Deepak Ji and friends Puneeta, Paramita, Surendra and Manoj. I'm grateful for the assistance, involvement, and friendship of members of my extended laboratory group. These people (Kavindra, Ramovatar, Sanjay, Shasmita, Seema and Jayprakash) make coming to work every day an enjoyable experience. The ability to work with such extraordinary people each day has truly been my privilege.

I appreciate the generous support from the funding agencies e. g., JNU-UGC fellowship, CSIR junior research fellowship and visiting research fellowship from Immunology Frontier Research Center, Osaka, Japan. This research was not possible without the financial support of the above funding agencies and institute.

Most importantly I am grateful for the support of my Pita ji, mammy, and my other family member Dadi ji, Bua ji, Bhai and Bhabhi, Without their love, encouragement and support, it would have been much more difficult to obtain my Ph.D. Thank you for having faith in me and believing that I will meet my goal. I truly appreciate all that each of you have done and will do for me. I'd like to thank to my lovely wife Manisha for her love, care, support, encouragement and understanding during past few year. She has helped me lot to share hand in research work and in social front.

Dharmendra K Tiwari
