CONTENTS

List of abbreviations i

List of Figures iv

List of Tables xii

1 Introduction and Objectives
1.1 Introduction 1
1.2 Aims and Objectives 14
1.3 Methodologies 16
1.4 References 19

2 Review of literature 23

2.1 Biodegradable polymeric microparticles for antigen delivery 23
2.2 Issues impeding development of PLGA microparticles for antigen delivery 24
2.3 Interaction of PLA/PLGA polymeric particles with antigen presenting cells 29
2.4 Co-delivery of adjuvants and antigens from polymeric particles. 31
2.5 Improving immunogenicity of T-independent antigens using biodegradable polymeric particles. 34
2.6 Candidate antigens 37
2.7 Pulmonary delivery of pneumococcal antigens 43
2.8 References 44
3 Evaluation of polymeric particle based delivery systems for polysaccharide antigens

3.1 Objectives
3.2 Materials
3.3 Methods
3.4 Results and Discussion
3.5 Conclusions
3.6 References

4. Optimization of spray drying process for formulation of polylactide particles

4.1 Objectives
4.2 Materials
4.3 Methods
4.4 Results and Discussion
4.5 Conclusions
4.6 References

5 Summary and Conclusions
