Abstract xi  

## 1 Introduction 1  
1.1 Background 1  
1.2 Information theory and spike trains 2  
1.3 Computation of Information in Single Spike 7  
1.4 Encoding of signals in spike trains 9  
1.5 Stochasticity and single neuronal system 11  
1.6 Our work 11  

## 2 Neuronal model with Exponential Distributed Delay: Analysis and Simulation study 18  
2.1 Introduction 18  
2.2 The Model with Distributed Delay 22  
2.2.1 Exponential delay kernel 23  
2.3 Analysis of the model 24  
2.3.1 Autocorrelation function-ACF 30  
2.3.2 Power Spectral Density 31  
2.3.3 Coefficient of Variation 33  
2.4 Numerical Simulations of FPT: ISI Distribution 34  
2.4.1 Numerical simulation of Coefficient of variation 36  
2.4.2 Study of JS Divergence for ISI distribution: LIF and the Proposed Model 38  
2.5 Conclusion 39
3 Characterization of ISI distribution using Pearson family of distributions: Neuron model with distributed delay driven by colored noise

3.1 Introduction .............................................. 42
3.2 Pearson System of Frequency curves .......................... 44
3.3 The Model with Distributed Delay .......................... 51
  3.3.1 Exponential delay kernel ................................... 53
  3.3.2 Model driven with additive white and colored noise ...... 54
3.4 Analysis of the model .................................... 56
  3.4.1 Autocorrelation Function .............................. 59
  3.4.2 Coefficient of Variation ............................... 60
3.5 Numerical Simulations for FPT and its Characterization .... 61
  3.5.1 Numerical Simulations .................................. 61
3.6 Characterization using Pearson System of frequency curves .... 64
3.7 Conclusion ........................................... 66

4 Bimodal and Multimodal ISI distribution in Integrate-and-Fire models with random parameters: Two Point Distribution Framework 68

4.1 Introduction .............................................. 68
4.2 Integrate-and-Fire Models:Functional forms of ISI distributions .......................... 71
4.3 Point Distribution Formalism .............................. 78
4.4 Study of random parameters in ISI distribution using TPD .......................... 82
  4.4.1 Randomized Random Walk(RRW) Model .................. 82
  4.4.2 Perfect Integrate-and-fire Model ....................... 84
  4.4.3 Leaky integrate-and-fire model ......................... 88
  4.4.4 Generalized IF model with distributed delay ............ 89
4.5 Conclusion ........................................... 90

5 Information Transmission in Spiking Neurons of Distributed Delay Neuronal model 97

5.1 Introduction .............................................. 97
5.2 Computation of Mutual Information .......................... 98
5.3 Computation of Input Entropy $H_m$ .......................... 101
5.4 Exponentially distributed delay model with Poisson jump process ...... 102
5.5 Numerical Simulations of the delay model .......................... 104
