Aims & Objectives
AIMS AND OBJECTIVES

1. To evaluate post prandial lipaemia in rats during development of obesity and diabetes by oral fat challenge.

2. To study the development of glucose intolerance in these rats by oral glucose tolerance test.

3. To study the relationship between post prandial lipaemia and glucose intolerance.

4. To study the relationship between post prandial lipaemia and markers of insulin resistance- insulin and leptin during the development of diabetes.

5. To study the relationship between post prandial lipaemia and atherosclerosis.
