ACKNOWLEDGEMENT

A journey is easier when you travel together. Interdependence is certainly more valuable than independence. This thesis is the result of three and half years of work whereby I have been accompanied and supported by many people. It is a pleasant aspect that I have now the opportunity to express my gratitude for all of them. This is perhaps the easiest and hardest chapter that I have to write. It will be simple to name all the people that helped to get this done, but it will be tough to thank them enough. I will nonetheless try...

The first person I would like to thank is my guide, Dr. Piyush Kant Pandey. During these years I have known Dr. Pandey as a sympathetic and principle-centered person. His overly enthusiasm and integral view on research and his mission for providing 'only high-quality work and not less', has made a deep impression on me. I owe him lots of gratitude for having me shown this way of research. He could not even realize how much I have learned from him, with whom I had many discussions on the realm of science and life.

I am deeply indebted to Dr. Madhurima Pandey, for providing me elderly advises and tips that helped me a lot in staying at the right track. I would also like to thank Dr. Santosh Sar for his kind Co-operation. In this chain of gratitude I would specially like to thank Professor T. RamaRao for his kind support during the sampling period.

My colleagues Richa Sharma, Shweta Choubey, Dr. Sumita Nair all gave me the feeling of being at home during work. The discussions, encouragement and critiques made by them were of essence to the progress of this work. I am grateful for Dr. Sumita who helped me to understand the procedural hurdles and calculation part during my research period. It was a pleasure to work with Shweta and I am thankful to her for rendering me the sense and the value of friendship. One of the best experiences that we shared through in this period was the 'Melodious harmony' that provided an additional and joyful dimension to our experimental work in the lab. A
special thanks goes to Dr. Manju Roy whom I have known for more than three years now. A kind, helpful friend who always stood by my side asking over and over again "When will you get it done? Next week? Next Month? When?

I am grateful to the management of Bhilai Institute of Technology, specially Honorary Secretary Shri I.P.Mishra, Director Professor B.S.Narang and Pricipal Dr. M.K.Kowar for their kind support.

I am also grateful for the Department of Chemistry at the Bhilai Institute of Technology for providing an excellent work environment during the past years and Mahesh Sahu and Jeetram for their cheerful assistance. I am thankful to Ramkrishna Rao for the computational support.

I feel a deep sense of gratitude for my husband late Harish kumar Verma who formed part of my vision and the happy memory of ours, still provides a persistent inspiration for my journey in this life. It is to him that I dedicate this work.

The chain of my gratitude would be definitely incomplete if I would forget to thank my parents and my in-Laws for creating an environment in which following this path seemed so natural. Thanks to my "Dadi" for her dedicated and loving care of my daughter Megha in my absence.

Finally, my dearest daughter Megha for whom I felt that she was some how neglected during this course of time, but she kept on making me smiling and laughing even when I was analyzing the most difficult aspects of writing. Those will be my treasured memories.

Yashu Verma
