“The key is to keep company only with people who uplift you, whose presence calls forth your best.”

- Epictetus

First and foremost, I would like to thank God, the merciful and the passionate for giving me the power to believe in my passion and to pursue my dreams by providing me the opportunity to step into the excellent world of science. During the process of putting this book together I realized how true this gift of writing is for me. I could never have done this without the faith I have in you, the Almighty. This thesis owes its existence to the help, support, and inspiration of many people in some way or the other during these years and deserves special mention. It is my pleasure to convey my gratitude to all of them in my humble acknowledgment.

In the first place, I would like to express my sincere appreciation and gratitude to Prof. R.K. Saxena for his supervision, advice, and guidance from the very early stage of this research. Above all and the most needed, he provided me unflinching encouragement and support throughout the course of the study. His truly scientist intuition has made him as a constant oasis of ideas and passions in science, which exceptionally inspire and enrich my growth as a student, a researcher and a scientist want to be. He has provided an optimum working environment in the laboratory, where lack of resources is something unimaginable due to his managerial skills and foresight. I am indebted to him more than he knows.

I would also like to acknowledge Prof. J.S. Virdi (Head, Department of Microbiology), Prof. Rani Gupta, Prof. Satyanarayana, Prof. R.C. Kuhad, Dr. Swati Saha and Dr. Amita for their advice and their willingness to share their bright thoughts with me, which were very fruitful for shaping up my ideas and their valuable suggestions helped me to complete this research work.

I sincerely acknowledge with thanks for the financial assistance provided by Department of Biotechnology (DBT) and CSIR—NMITLI for providing me the fellowship as Junior Research Fellow (JRF) and Council of Scientific and Industrial Research (CSIR), Govt. of India, as Senior Research Fellow (SRF) for carrying out the investigation.
Acknowledgement

I am highly obliged to Dr. Ashu Gulati (Hill Area, Tea Science Division) of CSIR-Institute of Himalayan Bioresource Technology, Palampur (H.P.) for giving me the opportunity to carry out the part of my research work on improvement in tea quality using tannase. I would also like to thank Mr. Robin Joshi (IHBT, Palampur) with whom I cherished the friendship and treasure all the precious moments, I shared with him during my stay in Palampur. His knowledge on his subject has helped me a lot to design the experiments and would really like to thank him for all that he did for me.

The technical support and assistance of Mr. Satish, Mr. Mustafa, Mr. Madan Lal, Mr. Shyam and Mr. Akhtar was important and I acknowledge all of them with sincere thanks.

I would like to express my special thanks to Dr. (Mrs.) Neelam Saxena for her continuous and unconditional support provided during these years.

I sincerely acknowledge Dr. Saurabh Saran and Dr. Pritesh Gupta for their advice, encouragement and care bestowed by them during the endeavor.

The help and support given to me by my colleagues, Vinod, Firdaus, Priyanka, Shweta, Garima, Kartik and Richi are highly acknowledged. I also acknowledge support and generous help of Mrs. Rekha Kaushik, Inder, Anurag and Raju Bhaiya.

My heartfelt thanks to my friends, Alok Bhardhav, Puneet Gupta, Sanjeev Raghuvanshi, Rishi, Pradeep, Bhuvnesh, Mahesh, Digvijay for lending me their unconditional help at various times in the present study. I greatly value their friendship and I deeply appreciate their belief in me. Thank you very much my friends, I will never forget all of your kindness. My special thanks to Aruna for believing in me and for her patience in the due course.

My deepest gratitude goes to my family for their unflagging love, wisdom, concern, support and strength provided when I needed most in my life; this thesis is simply impossible without their blessings and for that I am eternally grateful. Thanks for not just believing, but knowing that I could do this. I am indebted to my father ‘papa’ for his care and love. As a typical father in an Indian family, he worked industriously to support the family and spare no effort to provide the best possible environment for me to inculcate good
moral values and to provide the best education. He had never complained in spite of all the hardships in his life. I cannot ask for more from my mother ‘Ma’ as she is simply perfect. I have no suitable word that can fully describe her everlasting love to me. I remember her constant support when I encountered difficulties and she is always my pillar of strength. I remember, most of all, her delicious dishes which sometimes I used to miss during these years. Mother, I love you. I would also like to specially give my vote of thanks to Rani, Rashmi and Sunil for being supportive and caring siblings. I Love You Always & Forever!

This acknowledgement is incomplete without the special mention of my dear friend Swati (oh! ☺ Dr. Swati Misra) who always stood besides me and persistent confidence in me. I am so lucky and thankful to God for having her in my life as a good friend. You always tell me not to give up on my dreams and that everything that’s good takes time. I guess now is the time for all the good! Thanks for everything. I would also like to sincerely thank her family who constantly supported me a lot during the endeavor and never allowed me to feel that I’m away from home.

I would like to thank everybody who was important to the successful realization of thesis, as well as expressing my apology that I could not mention personally one by one. “Thank you”.

- Shailendra Raghuvanshi
