Research work is an important dimension in the field of entire higher education. Ph.D. dissertation is generally considered as a landmark in the field of research. I, as a student of philosophy have been dreaming since the beginning of my study that I must contribute something from myself in the contemporary frontiers of knowledge. This has remained as my imperative which comes from my consciousness as well as a directive inspiration from my spiritual inspirer. In a part of this entire enterprise I decided to work on some problem in the philosophy of Kant.

Kant was my subject of study in M. A. and I have been teaching Kant as a lecturer at post graduate level. I felt that in Kant’s critique of pure reason, the effective justification of this very title comes in Kant’s theory of transcendental illusion. The basic three components of classical metaphysical system viz., self, universe, and God are declared by Kant as examples of transcendental illusion. On the other hand, being a student of science in past I am interested in the current theories of theoretical physics and cosmology. Particularly the standard big bang theory, which states the possibility of the creation of the universe, has been found very much appealing by me. Actually, this is the subject of the first antinomy of Kant’s critique of pure reason. Kant’s position is appreciated and mentioned by Stephen Hawking in this regard. So I decided to work on Kant’s theory of transcendental illusion as a problem of my Ph.D. dissertation I have taken necessary and appropriate scientific references in this research work and I have concluded this work with the possible anticipation that cosmological as well as other questions are not that much illusory as they have been indicated by Kant.

For this research work, I am very much grateful to many scholars in the field of philosophy. First, and foremost, I express my most sincere gratitude to my Guide Dr. C. B. Vadher, Principal, Dharmendrasinhji Arts college, who has guided me not only in this research work but also in my entire carrier of philosophy. Without her help, this work could not have been completed in time and in this way I am also thankful to Dr. S. S. Sharma, Head, Department of philosophy, for clarification of certain points regarding the scientific interpretation of Kantian stand. I am extremely grateful, which is not a matter of linguistic expression, to my spiritual inspirer, not
only in this research work, but in the context of my entire consciousness is continuously being guided. I express my sincere gratitude to Dr. M. K. Padaliya, Vice-Chancellor, Saurashtra University, Rajkot, for initiating and providing the atmosphere of research in Saurashtra University, I am also thankful to Mr. Soni, Librarian, Saurashtra University and Mr. Andhariya, Librarian, Dh Arts College, for providing timely help in the search of research materials. Finally, I would like to thank my entire family for providing environment and leisure for this work. My particular thanks goes to my husband Mr. Chandresh J. Vaghela, and my father Vinodbhai T. Chavda, my mother Saralaben V. Chavda, my both sisters Nidhi V. Chavda and Kavita V. Chavda, my father-in-law Jagadishbhai V. Vaghela and my mother-in-law Ushaben J. Vaghela. Ultimately my most sincere gratitude goes to Immanuel Kant who provided me philosophical insight for doing this research work.
