Acknowledgements

This thesis is the outcome of the hard work, efforts and blessings of a lot of people who have contributed in my research in one way or the other. I would hereby, like to express my heartfelt gratitude towards each of them. Firstly I am thankful to the almighty for the very existence of the people and the work bestowed upon me. His blessings have helped me reach this stage where I am in a position to submit a thesis.

My thesis couldn’t have seen the light of the day without the guidance of my supervisor, Prof. Krishnamurthy Natarajan. From the initial struggling days of lab establishment, till the end of my research tenure, his affectionate supervision, constant encouragement, intellectual inputs and critical appreciations have enriched my understanding of the subject and helped me to develop an analytical outlook. He has always shared his experiences and nuances of research as well personal life and been there to encourage me in the highs and lows. I am profoundly grateful to him. He has truly been a father figure for me.

I am very grateful to our director Prof. B.C. Das for ensuring the easy availability of funding and providing us high quality research facilities which was necessary for my research.

I also owe my thanks to my advisory committee members Dr. Rajagopal Raman and Prof. Vani Brahmacari for their constant support and valuable inputs from time to time. I am indebted to Dr. Yogendra Singh, IGIB for allowing me to work in BSL-3 facility whenever I needed. I would also like to thank Dr. Pawan Sharma, former Staff Research Scientist, ICGEB for all the encouragement though I never had a chance to work on any project with him. I am also thankful to all the faculty members of ACBR for their support and help.

I would like to express my gratitude towards Dr. Anju Katyal and the Animal House staffs who helped in maintaining the mice facility and provided us with a constant supply of mice to carry out our experiments.

The work detailed in this thesis could not have been possible without the help of my colleagues in the lab. I am grateful to my past lab mates Sachin sir, Shashank Sir, Varsha and Deepa for teaching me the basics of conducting experiments and creating a very amiable and healthy environment at the workplace. I would also like to thank Neha, Shingar and Akash for all the help and support they offered at different phases of my work.

I am thankful to my current lab members for their friendship and pleasant interactions. In particular I would like to thank Arti, for her great company and constant encouragement especially towards the later part of my PhD. I extend my sincere thanks to Cecil, Mohit and Subhash for all the good times and conversations, scientific and often not so scientific. I am also grateful to Gunjan, Deepika and
Attinder for a good working atmosphere. I would also like to thank Manoj Bhaiya for his constant assistance and timely help with all the lab supplies.

I couldn’t have made it as enjoyably through my PhD as I did without all my friends who are all bottomless wells of friendship and support. I thank them for listening to my endless stories on pretty much everything in life and for all the great times that we have had. In particular I want to thank Sharen, Alka, Anchal, Priyanka, Mentha, Rita and Saeed. Thank you all for being there.

I owe my thanks to my seniors, friends, batch mates and colleagues from other labs. I am thankful to Vipin, Gayatri, Neeti, Brijendra, Shweta and Richa for all the pleasant interactions and help. I wish to express my warm thanks to Tarun and Shweta Sharma for their constant support and great company at our long and relaxing tea-sessions.

Words cannot adequately express my gratitude for the love and unwavering support of my parents. This project wouldn’t have completed without the regular encouragement and constant support of my family. It would never have been possible to carry out this work so smoothly without the unconditional love and support of my di, bhai and jiju. They have stood by me in my difficult times and rejoiced in my glorious ones.

Thank you would fall short for the gratitude and appreciation I have for my fiancé ‘Ankur’. His kind words of encouragement and advice always helped me to move further and aim higher. He is my pillar of strength and with him by my side even the most difficult tasks look easy. His presence in my life has given purpose to my career, research and my very being.

I would also like to thank Indian Council of Medical Research (ICMR), India for providing ample funds to help me complete my study.

Last but not the least I am grateful for the presence of every person around me as they have enriched my knowledge in some way or the other.

Jhalak Singhal
