Acknowledgements

This thesis is a result of cumulative efforts of a number of people who have contributed directly or indirectly, and to whom I am greatly indebted. It is a pleasure to convey my gratitude to all of them.

First and foremost, I am grateful to The Almighty who was with me throughout this course of time. He provided the courage to fight through the clouds of failures to achieve the sunlight of success.

From the formative stages of this thesis, to the final draft, I owe an immense debt of gratitude to my supervisor, Prof. M. V. Rajam. His sound advice and careful guidance were invaluable. He provided me freedom to work in true sense. But at the same time, he kept a close watch and recovered me when my step faltered. I have gained such a solid research foundation and I am truly grateful for the time he dedicated in my project and providing the resources that ultimately helped me succeed. Without his guidance I would not have been able to complete my research thesis.

I am also very grateful to my co-supervisor, Prof. P. C. Ghosh for his encouragement and practical advice. I really appreciate his guiding in my cell culture experiments, the commenting on my views and helping me enrich my ideas. He has always led me to point the right direction for the project.

I will be indebted to Dr. Anita Kamra Verma for inculcating the scientific aptitude during the graduation days. The seed sown by her helped me to reach this destination.

I would like to express my sincere gratitude to Prof. Sheela Srivastava, Prof. Deepak Pental, Prof. Akshay K, Pradhan, Prof. B. K, Thelma, Dr. P. K, Burma, Dr. Surajit Sarkar, Dr. Jagreet Kaur, Dr. Tapasaya Srivastava, Dr. Aruna and Dr. Kaustav Dutta for their valuable encouragements, input and suggestions.

I am also grateful to Dr. Alo Nag for providing the MCF 7 cell line.

I am also thankful to Prof. Sunil Mukherjee for reviewing my work from time to time and providing invaluable inputs.

I thank all my seniors, Dr. Ashwin, Dr. Anupama, Dr. Riffat, Dr. Prabha, Dr. Pranjal, Dr. Sandeep, Madhu for their help in my early years in the lab. Special thanks go to Maneesh sir (my brother) for the continuous experimental support and valuable discussion.

I am lucky enough to get the company from two labs. I am also thankful to current and former MVR lab members who maintained a warm, helpful and productive environment in the lab, Meenakshi, Sunayan, Aditi, Paridhi, Ruchi, Deepti, Mahak, Anjali, Ami, Bhawna, Srujana, Jhansi, Sneha, Gayatri, Rohini, Manish, Natraj, Saaraj and Sumit. I can call Ranjita, Aarti, Tamil, and Neeru my batchmates, as we joined this lab together. It’s been a privilege to have you people around.
My graduate studies would not have been the same without their generous support and help. At PCG lab, I had great time with Nikhil, Ranu, Pooja, Neha, Vinoth, Divya and Gulam sir. I will never forget those get together and fun we had. A special acknowledgement to Manendra for all the experimental help. I really never had to worry about anything. Thanks for being there.

My friends and seniors in the Genetics and Biochemistry department were great pillars. I would like to thank Thenral, Shaveta, Dr. Paritosh, Dr. Parul, Dr. Satish, Vaibhav, Amit, Sheetal, Priyanka, Roopangi, Garima and Piyush. I would cherish their valuable friendship and I deeply appreciate their help to me.

I would also like to thank Kasthuri for assistance in maintaining accounts and for providing those delicious ‘Idlis’ and Singhji, Ilaik ji and Ashok ji for keeping the things ready.

I wish to express my profound thanks to my parents for their endless love and prayers. My father always ushered me to become whoever I want to be. His positive aura provides me energy to strive through hardships. The ultimate inspiration comes from my mother who enlightens me through her efforts to show me the right path. It is her devotion and wisdom that constantly drives me to do my best in every aspect of my life. She provided me the ‘writing space’ as she took care of ‘Shabd’. I didn’t have to bother about him even for a fraction of second. I am truly blessed to have them as my parents. My brother, Ankush, has always been there for me.

A very special thanks to my dear husband, Brijesh for his practical and emotional support as I added the roles of wife and then mother, to the competing demands of research, study and personal development. He has actively supported me in my determination to find and realise my potential, and to make this contribution to our world. I am equally thankful to my loving in-laws for their selfless support and encouragement during the entire period of my work after marriage. Anything I inscribe here will be inadequate to express my feelings for them.

My son, Shabd, has brought immense joy in my life. I felt rejuvenated after seeing him after the long stressful periods of thesis writing.

This thesis would be incomplete without a mention of the support given me by my cherished friend, Madhumita. She kept my spirits up when the muses failed me. Without her lifting me up when this thesis seemed interminable, I doubt it should ever have been completed.

I would also like to acknowledge UCIF, Delhi University for providing the instrumentation facilities.

I am equally thankful to CSIR for providing me the Research Fellowships to complete my Ph.D. work and for DST for provided the grant for the project completion.
