List of Tables

1.1 Substituent groups on aromatic compounds
1.2 Properties of meta ring cleavage enzymes
1.3 Naturally occurring quinones and their properties
1.4 Quinones formed by various microorganisms
1.5 Applications of bacterial EPS
3.1a Viable counts of sea water, sediments and industrial effluent
3.1b Growth of isolated cultures in the presence of benzoate
3.1c Colony characters of the isolates on benzoate agar
3.2a Biochemical characteristics of strain P2d
3.2b Growth and colour in the presence of various aromatic compounds
3.2c Oxygen uptake rates of culture with various substrates
3.3 Effect of varying temperature, pH and aeration on growth and colour formation
3.4a Activities of enzymes present in Pseudomonas mendocina P2d
3.4b Effect of copper chelating compounds on colour formation
3.5a Colour formation with different concentrations of catechol by resting cells of strain P2d
3.5b Qualitative tests for quinone in benzoate medium
3.5c 4,5-Dianilino-o-benzoquinone derivative obtained from catechol
3.6a Qualitative tests for quinones in tyrosine
3.6b Characteristics of the pigment formed during growth in tyrosine medium
3.7 Wet and dry weights of EPS from strain P2d
