LIST OF FIGURES

1. Protocol for in vitro lysis and lysis protection assays
2. Sephadex G-150 column elution profile.
3. Blue Sepharose column elution profile
4. SDS-PAGE analysis of the antigen purified after sequential steps of purification
5. HPLC profile of the purified protein
6. Ouchterlony double-diffusion analysis of the antigen
7. Western blot (immunoblot) analysis of protein from various steps of purification using anti-albumin antibody
8. Isoelectric focussing of the purified antigen
9. Single dimensional peptide mapping using V8 protease
10. Dot hybridization analysis of total RNAs from adult liver, AK-5 and ZAH using albumin probe
11. Northern blot hybridization of poly A+ RNA isolated from normal liver, AK-5 and normal macrophages using cDNA probe specific for albumin
12. Northern blot hybridization of poly A+ RNA isolated from normal macrophages and AK-5 using cDNA probe specific for actin
13. Southern blot analysis of genomic DNA from AK-5, ZAH and rat liver
14. Dot hybridization analysis of genomicDNAs from adult liver, AK-5 and ZAH
15. Dot hybridization analysis of total RNAs from adult liver, fetal liver and AK-5 using alphafetoprotein probe
16. Western blot analysis of AK-5 membrane proteins
17. Immunoprecipitation of $^{35}$S-methionine labelled AK-5 antigen with anti-AK-5 and anti-albumin antibodies

18. SDS-PAGE analysis of proteins from sequential steps of purification from AK-5 cell membranes

19. Immunoprecipitation analysis using anti-albumin antibody and anti-AK-5 antibody with albumin and AK-5 antigen

20. Immunofluorescence of AK-5 cells with anti-AK-5 antibody

21. Comparison between the N-terminal sequences of rat serum albumin and the AK-5 antigen
