Acknowledgements

I must first thank my supervisor Prof. P. K. S. Pandey and my co-supervisor Dr. Garima Shukla for the numerous stimulating questions and conversations that inspired me to delve deeper into the research question and the constant guidance while I was writing the thesis. They gave me the freedom to follow my often naïve ideas and scaffolded me out of confusion. In these wild adventures their erudition and critical approach instilled in me the courage to go on and explore deeper. During all these years, I have lost count of how many times I have said, 'Thank you for being there!' This thesis would not have started or finished without them and that is not an exaggeration.

I am grateful to Prof. Anvita Abbi for her help and encouragement during my studentship at JNU. But for her timely support in many matters, I would not have been able to conduct many of the recording sessions. My gratitude to Ayesha for the inspiration to work untiringly towards the goal. I take this opportunity to thank Prof. Narang for her warmth. I cannot forget to thank Hari Madhab Ray and Yankee Modi who have supported me in various ways.

My everlasting gratitude also goes to Prof. Gupta for his support and constant inspiration during numerous discussions we had in the past six years. Prof. Chinmay Mukhopadhyay has been a constant inspiration for me all these years and has helped me without hesitation whenever I was in a fix and needed his opinion. My heartfelt gratitude to Bhadurida for opening the doors of Language Labs Complex for my data collection and being the support whenever I needed help.

I take this opportunity to thank Department of Science and Technology for awarding me the project grant and financial support during PhD. I sincerely thank Dr. H. B. Singh for his support and advice during the project.

I am also delighted to express my heartfelt gratitude to Prof. Aditi Lahiri, University of Konstanz, Germany for her stimulating questions that provided the impetus to look for the binding parameter within the syllable and Prof. Dr. Peter Indefrey, Max-Planck Institute for Psycholinguistics, Nijmegen, for the enlightening discussion regarding syllable representation. My gratitude also goes to Prof. Robert Oostenvelt, F.C. Donders Centre for Cognitive Neuroimaging, for many stimulating discussions. I also thank Prof. Alessandro Treves, SISSA for his inspiration and insightful advice. My thanks also to Nancy Hoogenboom, Doug Davidson and Silke Hamann, for their support and inspiring discussions.

I feel delighted to thank Prof. Diamond, ICTP, Trieste, Prof. Jacques Mehler, SISSA and Dr. Luca Bonatti, SISSA and Dr. Evan Balaban, McGill University for their support and inspiration during early phase of my work. I must thank Prof. Gibbon, University of Bielefeld, Germany for his support and advice and insightful questions on wavelets during his stay in JNU. I
sincerely thank Prof. P. G. Patel, University of Ottawa, for his support and advice. I would also like to thank Prof. Padakannya, University of Mysore, for his comments on my experiments. I would also like to thank Dr. K. Singh, IIT Delhi for allowing me to carry out EEG studies in her laboratory.

I would also like to honour my subjects and friends (Atanu, Tridha, Mousumi, Sudipto, Anurima, Tushar) who participated in the experiments and spent hours for a lively discussion over many cups of coffee.

Rawatji has been our support system for all these years and I cannot thank him enough for all that he has done. I must express my thanks to Bhagwatiji and Karamchandji, Navin and Sanjeev for their administrative support. My thesis would not have reached its final state without the help of Nandkishoreji (Language Labs Complex).

My friends have provided me tremendous encouragement. Paromita, Tushar, Tulsi, Ranjita, Saswati, Udayji and Bidisha have always been there whenever I needed them. My father and sister have been my strongest support and pillars of inspiration all these years.

This list would not be complete without acknowledging the flights of ‘systems to molecules’ and ‘dispersions and conglomerations’ with Shantanu, who has been a great friend all these years.

This thesis is an exploration of the ‘binding systems’. For all errors and omissions, I take the sole responsibility.
