Acknowledgements

It has been a long journey since, I registered as a research scholar and reaching the point of submitting my thesis, which is supposed to be the most awaited day in a research scholar's life and the credit for the same goes to the Almighty, whose blessings at every step helped me in completing the task.

It was my dream to be a part of Biotechnology Department of JNU as a Ph.D. student and continue my passion for science, after I completed my post-graduation. My dream turned into reality on the 24th September 2004, when I had the opportunity to meet Prof. Aparna Dixit of the School of Biotechnology, JNU at New Delhi. My happiness knew no bounds when she gave her consent to be my research mentor. I admire her foresightedness in realizing my research potentials. She inculcated in me the attitude of being professional. Her mantra to success has been “hard work is the key to success”. She is a firm believer that “success and failures” are the two sides of the same coin and to never consider “failure as the enemy of success”. She believes that “success doesn’t come to you, but one has to move towards it step by step without getting disheartened. This made me realize the importance of sincerity, dedication and hard work to bring efforts to fruition. Her guidance, constructive criticism, love and affection will always be a part of my fond memories. I would like to imbibe her professional qualities and abilities in my life so as to become a better scientist and moreover a better human being. I would like to thank Dr. Lalit Garg, for his constant support and help in pursuing my scientific journey. His scientific suggestions pertaining to my research were quite encouraging. I deeply acknowledge the help of Ashish and Neha; especially at instances when I stayed in their room and shared their belongings thereby enabling me to finish up my tasks as per schedule, which I would not have been able to manage during the odd hours of my stay in the lab. Thank you ma’am and sir for every thing you have done for making me feel at home even when I was at work.

I am really indebted to the support rendered by Professor Rakesh Bhatnagar and I appreciate his scientific aptitude and problem solving approach. His way of thinking positively in a progressive direction is worth appreciating. My words fall short for the help rendered by Dr. Rajiv Bhat. His scientific temperament and perseverance have been a constant source of motivation. His lectures on proteins made me feel interested in the science of Biophysics. He rendered his full support and provided me his laboratory facilities and space to work. My special thanks go to Professor Santosh Kar for his guidance and stimulatory discussions in the field of Immunology. I would like to thank Professor K.J. Mukherjee for developing my interest in Bioprocess Technology. My thanks also go to Dr.
Devapriya Choudhury, from whom I have learnt a lot during our scientific discussions. I am also indebted to the help and support rendered by the other faculty members namely, Professor Uttam Pati, Dr. S.S. Maitra, Dr. Swati Tiwari, Dr. Ranjana Arya and Dr. M.S. Rajala.

Friends always occupy the best place in our heart. I shall fail in my duties if their constant moral and academic support goes unmentioned in my thesis. First of all, I would like to thank all my labmates for being supportive and helpful. Raaj Bhaiya deserves special mention as he taught me to remain cool even when the results are not as per our expectations. I still miss his presence in the lab. The moral support provided to me by my seniors namely, Gautam, Alli, Tanu and Sahu is greatly acknowledged. The time spent with Prabha, Preeti, Vibhuti, Puneet and Shailiesh will always be cherished in my fond memories. "Sunni" (Sunita) has been my strength in the lab. I can never forget her ways of taking things positively and lending a listening ear to my jabbering. I myself don’t know how our friendship grew in such a short span of time and we really shared nice moments of togetherness which will never fade with time. I will miss her but I am sure that I have made a space for her in my heart. The love, concern and kindness of “Jitu” towards me are really incredible and I miss his excellent “Shaayaris” and cute spontaneous poems. I wish him all the best in his life. The help rendered by all the master’s students and especially the ones with whom I was associated deeply is greatly acknowledged. Special thanks to Shashi Suman, Shweta Chatrath, Susheel, Shanti, Akash, Varsha, Dhananjay, Priyanka, Shivani K, OP, Himanshu, Sumit, Bharti and Nidhi.

I would also like to thank my friends of the adjacent lab for accommodating me in their close knitted family. The "community luncheons..." will always be fondly remembered. Shivangi, Manpreet, Parul, Kanchan, Divya, Rajni, Shashikala and Manish, constituted our “masti” team which made me feel relaxed after a tiring day. Manish and Amit deserve special mention for their help at odd times without any hesitation, is greatly acknowledged. Thank you once again all for constantly helping and supporting me throughout my stay in the School.

My seniors in the School especially Anuj, Anoop and Saurabh were always by my side. Their immense help and support and being more like friends than seniors, are beyond appreciation. Special thanks to Anoop for making me realize the importance of personal relationships which we often tend to forget in our struggle for achieving professional goals. His thoughts and way of taking life positively is incredible and beyond appreciation. I pray God that my friendship with them remains forever. I will miss them all.
I would like to especially thank "Neeraj", who accompanied me for four long years of my journey and his presence has always been a great moral support. The similarity of our thoughts and choices brought us close to each other and the quality time we spent together will always be cherished as “golden moments” of my life. I really missed him during the last year of my research. The sincerity with which he used to work with me and his guidance from time to time is worth appreciation. His way of taking things positively with a cool head and faith in God, gave me strength and changed my approach to problem solving. I am really thankful to God for bestowing me with a great pal like him.

The help rendered by the administrative staff who made my paper work easier and technical staff of the School, namely, Naipal Singhji, Sindhu mam, Yadavji, Amreshji, Umeshji, Sarjitji, Ghanshyamji and Taposh is greatly acknowledged. I dare not forget the untiring efforts of Rajesh Bhaiya for preparing infinite cups of tea when ever desired.

I am today able to reach this stage only because of the endless support of my parents and my grandparents and specially “papa”. They never expected me to be a part of any of the family commitments which allowed me to spend my maximum time in the lab. They waited for long hours for me missing their dinners and most of the time remained awake until I reached home. Their patience, “never say die spirit” and appreciating my hard work made me reach the top with a difference. Words would fall short if I try to define their support, love, affection, concern and most importantly belief in my abilities. Thank you papa, mummy, dadu and dadi once again for showing me the right direction and teaching me how to climb the stairs of success smoothly and it’s because of you all, today I am able to reach the zenith.

How can I forget the beautiful gift which God had bestowed me with since, my existence on this planet? Yes, my Twin sister “Shivangi”. I would like to thank here again my research mentor and Professor Bhatnagar for their consent to accommodate both of us together in the same School which further strengthened our bonds. Hence, I was immensely happy to continue the togetherness, which we shared since birth, during the course of this journey also. Her love, concern, support, enthusiasm and healthy competition have nurtured my professional and personal development. I pray God to give us many more years of companionship. She has always been a pillar of strength which kept me motivated. I will always cherish the time we spent together as the “Golden moments” of our life.

Council of Scientific and Industrial Research (CSIR) is duly acknowledged for the financial support for the five consecutive years.

Shivani
