ACKNOWLEDGEMENTS

First and foremost, I would like to thank God, for giving me all that I have, and making me all that I am. I feel blessed by God to have so many people around me who made my toughest journey such a nice experience in my life.

I sincerely appreciate all the kind efforts of my research supervisor, Dr. S. B. Singh, Professor, Department of Mathematics, Punjabi University, Patiala, that he has put forth in guiding me throughout the course of this work. He is not only a great teacher but also a great person. It has been a great honour for me to work under his guidance and to learn the intricacies of research from him. Working on a Ph. D. while working full time as an Assistant Professor was not only hard work and challenging for me but also was a challenge for him. He worked with me at an extraordinary flexibility. He went out of his limits several times to make this project happen. Without his help this thesis wouldn’t have seen the light of the day.

I wish to express my gratitude to Dr. R. K. Nagaich and entire staff of Department of Mathematics, Punjabi University, Patiala for their support for smooth progress of the Ph.D. work.

My sincere thanks are due to my friends Dr. Ashwani Kumar, and Dhiraj Dogra for offering all kinds of support.

Of course, I am grateful to my parents and my wife for their patience and love. Without them this work would never have come into existence (literally).

Finally, I want to express my special thanks to my friend Dr. Minto Rattan who made this work possible. It was his motivation which always kept me going and never let me stop.

Neeraj Chamoli
