This thesis arose in part out of three years of research that has been done since I joined Centre for Plant Biotechnology, Department of Science and Technology, Govt. of Haryana, CCSHAU New Campus, Hisar-125004 (Haryana), India as Project Fellow. It is a pleasure to convey my gratitude to all in my humble acknowledgement.

I feel immense pleasure in expressing my heartfelt, sincere and profound gratitude, obligation, indebtedness to my esteemed co-supervisor, Dr. (Mrs.) Rajwant K. Kalia, former Senior Scientist, Centre for Plant Biotechnology, Department of Science and Technology, Govt. of Haryana, CCSHAU New Campus, Hisar-125004 (Haryana), India and presently Principal Scientist, Central Arid Zone Research Institute (CAZRI), Jodhpur-342003 (Rajasthan), India for her invaluable guidance, constant encouragement, generous help, immense interest and untiring assistance during the course of this study. Her unfailing dedication in solving my problems during the entire investigation was a constant source of inspiration. It was indeed a pleasure for me to work under her scholarly guidance.

It is my profound privilege to express my sincere thanks to Dr. Ashok K. Dhawan, former Director (Technical) Centre for Plant Biotechnology, Department of Science and Technology, Govt. of Haryana, CCSHAU New Campus, Hisar-125004 (Haryana), India and presently Dean, Central University of Punjab, Bhatinda- 151001 (Punjab), India for his advice, guidance and providing necessary facilities and support for the conduct of the present study at Centre for Plant Biotechnology, Hisar. Thanks are also extended to Dr. (Mrs.) Pushpa Kharb, present Director (T), and other scientific as well as technical staff of the Centre for their help and constant inspiration during the entire investigation.

My special thanks are due to my supervisor Dr. (Mrs.) Sunita Dalal, Assistance Professor, Department of Biotechnology, Kurukshetra University, Kurukshetra (Haryana), India for her support, help and encouragement during the entire investigation. I also express my gratitude to other faculty members of the department Dr. Jitender Sharma, Professor & Chairperson and Dr. R. P. Mandhan, Professor & former Chairperson, for all the help they provided me during the course of my work.

No words of mine can adequately express my deep sense of gratitude to my husband, Dr. Rohtas Singh (Project Scientist), Centre for Plant Biotechnology, for his sustained encouragement, whole-hearted co-operation, timely help and support during the entire course of this research work.
I sincerely feel to thank Department of Bio and Nano-technology, Guru Jambheshwar University of Science and Technology, Hisar (Haryana), India to facilitate the Nano-photometer and Forest Department, Yamunanagar (Haryana), India for maintaining the tissue culture raised plants in the field.

I also wish to put on record my cordial thanks to all my colleagues whose presence somehow perpetually refreshed me, and their helpful nature has made them memorable. Many thanks go in particular to Ms Ishu Verma, Technical Assistant from Centre for Plant Biotechnology, for giving me pleasant time when working together with her in the lab and Mr. Subendhu Roy Choudhary, Project Fellow who have been a source of good advice and collaboration. I avail this opportunity to place on record my gratitude to all my unnamed-friends whose invaluable support and encouragement has been a vital ingredient in making this endeavour a success.

I really lack words to express my ardent sentiments to my in-laws, who deserve special mention for their inseparable support and prayers. Without their understanding it would have been impossible for me to finish this work. I feel proud of my brother and sister-in-law, Ram Chander and Kamlesh, as they have been one of my best counsellors and my niece Sheyjal for her angel smile. My deepest gratitude goes to my parents for their unflagging love and support. My special gratitude to my brother, Ramesh and sister, Sulochana whose silent wishes have guided my efforts, without which it would have never been possible for me to reach this stage. Silence is the best expression of my love and affection for them. The little Angle, ‘Prince’ and ‘Chanda’ encouraged me through their refreshing smile.

Financial assistance in the form of fellowship received from Department of Biotechnology, Ministry of Science and Technology, Govt. of India, New Delhi, under project nos. BT/PR/5261/AGR/16/459/2004 and BT/PR11091/NDB/51/179/2008, is also thankfully acknowledged.

Finally, I would like to thank everybody who was important to the successful realization of thesis, as well as expressing my apology that I could not mention personally one by one. Last but not the least, thanks to almighty God for putting my life through all the tests in the past years and make my life more beautiful.
