List of figures

3.8 Variation of real part of impedance ($Z'$) of (a) LS$_1$ and (b) LS$_2$ samples as a function of frequency..........................................................32

3.9 Variation of imaginary part of impedance ($Z''$) of (a) LS$_1$ and (b) LS$_2$ as a function of frequency.........................................................34

3.10 Variation of relaxation time ($\tau$) of (a) LS$_1$ and (b) LS$_2$ ceramic as a function of temperature.................................................................35

3.11 Variation of ac conductivity ($\ln\sigma_{ac}$) as a function of inverse of absolute temperature ($10^3/T$) at different frequencies for (a) LS$_1$ (Li$_2$SiO$_3$), (b) LS$_2$ and (c) L$_2$S ceramics..........................................................36-37

3.12 Frequency dependence of ac conductivity ($\sigma_{ac}$) at various temperatures for (a) LS$_1$ (Li$_2$SiO$_3$) ceramic and (b) LS$_2$ ceramic............39

3.13 Variation of bulk density of Li$_2$SiO$_3$ ceramic with sintering temperature….40

3.14 (a) variation of dielectric constant ($\varepsilon_r$) of all the samples with frequency at room temperature (35 °C) (b) variation of loss tangent (tan$\delta$) with sintering temperature at 3MHz.................................................................41

4.1 Comparison of XRD patterns of (a) Li$_2$SiO$_3$ (b) ZnO added Li$_2$SiO$_3$ ceramics at room temperature.........................................................45

4.2 SEM micrographs of the samples with different ZnO contents (a) 0 wt %, (b) 0.1 wt %, (c) 0.3 wt %, (d) 0.5 wt %.........................................................46

4.3 Variation of relative dielectric constant ($\varepsilon_r$) (a) and loss tangent (tan$\delta$) (b) with frequency at room temperature for various ZnO contents..............47

4.4 Temperature dependence of $\varepsilon_r$ of Li$_2$SiO$_3$ ceramics with different ZnO contents 0.0, 0.1, 0.3 and 0.5 wt % at different frequencies (1 kHz, 10 kHz, 100 kHz and 1 MHz).........................................................49-50

4.5 Comparison of variation of (a) $\varepsilon_r$ and (b) tan$\delta$ with temperature (30 °C – 200 °C) at 100 kHz for all the samples.................................50

4.6 Temperature-frequency dependence of ac conductivity of the samples with different ZnO contents (a) 0 wt %, (b) 0.1 wt %,
4.7 Complex impedance plots, \(Z'\) vs \(Z''\) at different temperatures for
(a) 0.0 wt\% (b) 0.1 wt\% (c) 0.3 wt\% and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) ceramic with corresponding equivalent circuit [inset].................54

4.8 Variation of (a) \(R_b\), \(R_{gb}\) and (b) \(C_b\), \(C_{gb}\) with ZnO concentration at 400 °C....56

4.9 Variation of imaginary part of impedance (\(Z''\)) as a function of frequency of (a) 0.0 wt\% (b) 0.1 wt\% (c) 0.3 wt\% and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) at three different temperatures..............................56

4.10 Variation of relaxation time with \(10^3/T\) of (a) 0.0 (b) 0.1 (c) 0.3 and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) calculated from \(Z''\) with frequency and \(M''\) with frequency (inset).................................58

4.11 Variation of imaginary part of modulus (\(M''\)) with frequency of (a) 0.0 wt\% (b) 0.1 wt\% (c) 0.3 wt\% and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) at selected temperatures.................................59-60

4.12 Variation of \(M'\) with frequency of (a) 0.0 wt\% (b) 0.1 wt\% (c) 0.3 wt\% and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) at selected temperatures.................................60

4.13 Variation of normalized \(Z''\) and \(M''\) with frequency for (a) 0.0 wt\% (b) 0.1 wt\% (c) 0.3 wt\% and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) at different temperatures.......................61

4.14 Plot of \(M''/M''_{\text{max}}\) with \(\log_{10}(ff_{\text{max}})\) of (a) 0.0 wt\% (b) 0.1 wt\% (c) 0.3 wt\% and (d) 0.5 wt\% ZnO added Li\(_2\)SiO\(_3\) at different temperatures.......................63

4.15 Variation of ac conductivity of samples with frequency at different temperatures.........................................................65

4.16 Variation of \(n\) as a function of temperature for all the samples.................65

5.1 Room temperature XRD pattern of MAS glass-ceramic.........................69

5.2 SEM micrographs of fresh fractured surface of MAS glass-ceramic
with different magnifications at room temperature.................................70

5.3 Variation of dielectric constant (\(\varepsilon_r\)) and loss tangent (\(\tan\delta\)) with frequency at room temperature.........................................................71

5.4 Variation of \(\varepsilon_r\) (a) and \(\tan\delta\) (b) with temperature for MAS glass-ceramic....73

5.5 DTA curve for MAS glass-ceramic prepared by sintering route..............74
5.6 Variation of ac conductivity ($\ln \sigma_{ac}$) as a function of inverse of absolute temperature ($10^3/T$) at four different frequencies for MAS glass-ceramic.....75

5.7 (a) Nyquist plots of MAS glass-ceramic at different temperature. (b) Nyquist plots of MAS glass-ceramic with equivalent circuit (inset)......77

5.8 Variation of real part of impedance ($Z'$) of MAS glass-ceramic as a function of frequency......................................................78

5.9 Variation of imaginary part of impedance ($Z''$) of MAS glass-ceramic as a function of frequency........................................79

5.10 Variation of relaxation time ($\tau$) as a function of temperature.....................80

5.11 Variation of $M'(a)$ and $M''(b)$ with frequency of MAS glass-ceramic at selected temperatures.......................................................81

6.1 XRD patterns of Li$_2$O doped MAS glass-ceramics........................................85

6.2 Bulk density and Apparent porosity of the MAS glass-ceramics doped with $x$Li$_2$O ($x = 0.0, 0.1, 0.3$ and $0.5$) sintered at $1000$ °C.................................86

6.3 SEM micrographs of the samples at room temperature..............................87

6.4 Variation of relative dielectric constant ($\varepsilon_r$) (a) and dielectric loss (tan$\delta$) (b) with frequency at room temperature for various Li$_2$O contents..............88

6.5 Variation in (a) $\varepsilon_r$ and (b) tan$\delta$ of Li$_2$O doped MAS glass-ceramics with temperature at 10 kHz for different $x$........................................90

6.6 DTA curve for MAS glass-ceramic prepared by sintering route...................91

6.7 (a) Nyquist plots of Li$_2$O doped MAS glass-ceramic for $x = 0.5$ with equivalent circuit (inset) (b) Nyquist plots of Li$_2$O doped MAS glass-ceramic as a function of $x$ at 400 °C and 450 °C (inset)........... 92

6.8 Variation of imaginary part of impedance ($Z''$) of Li$_2$O doped MAS glass-ceramics as a function of frequency for different Li concentrations at 400 °C and 450 °C (inset).................................................93

6.9 Variation of relaxation time ($\tau$) as a function of temperature....................94

6.10 Variation in $Z''$ and $M''$ with frequency at a particular temperature for different $x$.................................................................95

6.11 Variation of ac conductivity ($\ln \sigma_{ac}$) as a function of inverse of absolute temperature ($10^3/T$) at four different frequencies for MAS glass-ceramic.....75
temperature \(10^3/T\) at two different frequencies for all the samples........ 96-97

6.12 Variation of ac conductivity of samples with frequency at different
Temperatures........................................................................................................ 99

6.13 Variation of \(n\) as a function of temperature for all the samples............. 99

6.14 Variation of \(\sigma_{dc}\) with inverse of absolute temperature of all the samples
at high temperature.................................................................................................. 100

7.1 XRD patterns of ZnO doped MAS glass-ceramics................................. 104

7.2 Bulk density and Apparent porosity of the MAS glass-ceramics
doped with \(x\)ZnO \((x = 0.0, 0.1, 0.3\) and 0.5\) sintered at 1000 °C. ............ 105

7.3 SEM micrographs of the samples with different ZnO contents sintered
at 1000 °C. (a) 0 wt% , (b) 0.1 wt%, (c) 0.3 wt%, (d) 0.5 wt%................. 106

7.4 Variation of relative dielectric constant (\(\varepsilon_r\)) and dielectric loss (tan\(\delta\))
with ZnO contents at room temperature................................................................. 107

7.5 Variation in (a) \(\varepsilon_r\) and (b) tan\(\delta\) of ZnO doped MAS glass-ceramics
with temperature at 10 kHz for different \(x\).......................................................... 108

7.6 Nyquist plots of ZnO doped MAS glass-ceramics at four
different temperatures........................................................................................... 110

7.7 Comparison of Nyquist plots of ZnO doped MAS glass-ceramics
at 400 °C.................................................................................................................. 110

7.8 Variation of \(R_b\) and \(C_b\) (inset) with ZnO concentration at 400 °C........... 111

7.9 Variation of imaginary part of impedance (\(Z''\)) of ZnO doped
MAS glass-ceramic as a function of frequency for different ZnO
concentrations at different temperatures............................................................. 112

7.10 Variation of imaginary part of modulus (\(M''\)) with frequency of
(a) 0.0 wt% (b) 0.1 wt% (c) 0.3 wt% and (d) 0.5 wt% ZnO doped
MAS glass-ceramic at selected temperatures....................................................... 113

7.11 Variation of imaginary part of modulus (\(M''\)) with frequency for
different ZnO concentrations at 400 °C and 450 °C [inset]............................. 114

7.12 Variation in \(Z''\) and \(M''\) with frequency at a particular temperature
for different \(x\).......................................................................................................... 115
7.13 Variation of relaxation time ($\tau$) obtained from (a) $Z''$ spectra and
(b) $M''$ spectra of samples with temperatures for $x=0$, 0.1, 0.3 and 0.5…… 116-117
7.14 Variation of ac conductivity of samples with frequency at different
Temperatures........................................................................................................118-119
7.15 Variation of $n$ as a function of temperature for all the samples............119
7.16 Variation of $\sigma_{dc}$ with inverse of absolute temperature of all the samples
at high temperature..............................................................120
