ACKNOWLEDGEMENT

This study was inspired by my interaction with the Informatics community which gathered in New Delhi during the mid 1980s and attempted to overcome the flaws and deficiencies in information and communication technologies. That the information dimension offered considerable opportunities for action was recognised by India's Prime Minister, his advisor on National Technology Missions.

My guide Professor M.L. Sondhi helped me by raising questions about a new agenda for SAARC, and stressing the need to link sustainable development and environmental policies to the general theories of conflict resolution.

I wish to thank many of my other teachers and fellow students who gave their time and knowledge and shared my concern for the future of South Asia.

The meetings with Mr. Abul Ahsan and Mr. K.K. Bhargava, the then Secretary Generals of SAARC helped in clarifying the extent of existing cooperative arrangement. Mr. A.P. Venkateswaran, former Foreign Secretary, Prof. Bhabani
Sengupta and Mrs. Navrekha Sharma, Joint Secretary, Ministry of External Affairs, Government of India also were good enough to share their perspectives on regional cooperation.

Lastly, the staff of American Centre Library, British Council Library and my own University Library were all very helpful in the completion of this work for which I thank them.

Biswajit K. Mohapatra
