ACKNOWLEDGMENTS

I like to express my sincere gratitude and indebtedness to Prof. T. Sharma, whose expertise, understanding, and patience, added considerably to my Ph.D experience. With his enthusiasm, his inspiration, and his great efforts to explain things clearly and simply, he helped for meaningful execution of the work till its completion. Throughout my thesis-writing period, he provided sound advice, good teaching, and lots of good ideas. I would have been lost without him.

I also sincerely and thankfully acknowledge Dr. B. K. Sharma, for his valuable guidance and constant support throughout. He has encouraged me more than anyone and to whom I could always look for good advice. He has been a great inspiration for me in many ways and has helped me throughout the process of writing the thesis. I doubt that I will ever be able to convey my appreciation fully, but I owe him my eternal gratitude.

At the outset, I like to express my sincere and heartiest thanks to Dr. Amalendu Sinha, Director, CIMFR, Dhanbad, who sparked my initial interest for doing Ph.D in the energy sector and for providing me, the scientific and moral support towards execution of the work.

I would like to thank my gasification team and all my colleagues in the institute, who have helped and encouraged me. A complete list would be too long to include at this point, but most will find their names somewhere in the references and I ask them to accept that as a personal thank you.

Finally, I hope that this work will contribute to the development of a better understanding of gasification processes and their future development. If it is of use to those developing new gasification projects, then it will have achieved its aim.

Prakash Dhondiram Chavan
