Acknowledgements vii

1 Introduction 1
   1.1 An Introduction to Planetary Nebulae 1
      1.1.1 Post Mainsequence Stellar evolution 2
      1.1.2 Mass-loss from giant stars 5
      1.1.3 Planetary Nebulae Formation 6
      1.1.4 Nebular Ionization 11
      1.1.5 Radiations from PNe 12
   1.2 Morphological classification of PNe 13
   1.3 Single and binary star hypotheses for PNe morphologies 17
      1.3.1 Single star hypothesis 17
      1.3.2 Binary star hypothesis 19
      1.3.3 PNe formed in the Common Envelope (CE) binary system 20
   1.4 The importance of and the motivation for the present study 22
   1.5 The plan and content of the Thesis 23

2 Observations and Data Analysis 24
   2.1 Introduction 24
      2.1.1 The Imaging Fabry-Perot Spectrometer (IFPS) 24
      2.1.2 Principle of Operation 26
      2.1.3 Optical configuration of PRL-IFPS 27
   2.2 Observations 30
   2.3 Data Analysis 31
      2.3.1 Spectrographic Mode (SPM) 31
      2.3.2 Scanning Mode (SCM) 33
      2.3.3 Error Analysis 35
3 Spatio-Kinematic study of Planetary Nebulae of different morphologies formed from different progenitors

3.1 Introduction ................................................. 40
3.2 NGC 4361: A Quadrupolar Planetary Nebula ............... 42
   3.2.1 Introduction ........................................... 42
   3.2.2 Observational details ................................. 42
   3.2.3 Results ................................................ 44
   3.2.4 A Physical Model ..................................... 45
   3.2.5 Formation Scenario for NGC 4361 ..................... 48
   3.2.6 Discussion ............................................. 52
3.3 NGC 1514: An Elliptical Planetary Nebula with a suspected close binary progenitor ............. 55
   3.3.1 Introduction ........................................... 55
   3.3.2 Observational details ................................. 56
   3.3.3 Results ................................................ 57
   3.3.4 A Physical Model ..................................... 64
   3.3.5 Formation Scenario for NGC 1514 ..................... 65
   3.3.6 Discussion ............................................. 66
3.4 Possible trends in expansion velocities of PNe formed from CE binary systems ......................... 68
   3.4.1 Introduction: ........................................... 68
   3.4.2 Expansion velocity in PNe formed from close binaries ..... 68

4 Interaction of Planetary Nebulae with Interstellar Medium: A case study of NGC 246 ............... 73
4.1 Introduction .................................................. 73
   4.1.1 Effects of PN interaction with ISM ................... 74
4.2 A Spatio-kinematic Study of the interaction of the PN NGC 246 with the ISM ......................... 76
   4.2.1 Introduction ........................................... 76
   4.2.2 Observational details ................................. 77
   4.2.3 Results ................................................ 78
5 Summary and Future Plans

5.1 Main results of the present work

5.1.1 NGC 4361

5.1.2 NGC 1514

5.1.3 NGC 246

5.2 Future Plans
