**List of Figures**

Figure 3.1 *Conyza canadensis*

Figure 3.2 *Sambucus wightiana*

Figure 3.3 *Anthemis cotula*

Figure 3.4: Serial dilution technique used for soil samples.

Figure 4.1: Occurrence of species of bacteria in the patches invaded and uninvaded by (a) *Conyza canadensis* and (b) *Sambucus wightiana*.

Figure 4.2: Occurrence of species of fungi in the patches invaded and uninvaded by (a) *Conyza canadensis* (Ascomycetes), (b) *Sambucus wightiana* (Ascomycetes) and (c) *Sambucus wightiana* (Basidiomycetes).

Figure 4.3: Number of soil bacteria (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.4: Number of soil bacteria (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.5: Number of soil bacteria (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.5d: Percent increase in the number of soil bacteria in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.6: Number of colony forming units of soil fungi (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.7: Number of colony forming units of soil fungi (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.8: Number of colony forming units of soil fungi (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.
Figure 4.8d: Percent increase/decrease in number of soil fungi in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.9: Soil microbial biomass (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.10: Soil microbial biomass (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.11: Soil microbial biomass (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.11d: Percent increase/decrease in the soil microbial biomass in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.12: Soil microbial activity (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.13: Soil microbial activity (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.14: Soil microbial activity (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.14d: Percent decrease in the soil microbial activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.15: Soil protease activity (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.16: Soil protease activity (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.17: Soil protease activity (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.17d: Percent increase/decrease in soil protease activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*. 
Figure 4.18: Soil alkaline phosphatase activity (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.19: Soil alkaline phosphatase activity (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.20: Soil alkaline phosphatase activity (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.20d: Percent decrease in soil alkaline phosphatase activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.21: Soil acid phosphatase activity (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.22: Soil acid phosphatase activity (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.23: Soil acid phosphatase activity (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.23d: Percent decrease in soil acid phosphatase activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.24: Soil urease activity (mean±SE) in *Conyza canadensis* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.25: Soil urease activity (mean±SE) in *Sambucus wightiana* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.26: Soil urease activity (mean±SE) in *Anthemis cotula* invaded and uninvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.26d: Percent increase/ decrease in soil urease activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*. 
Figure 4.27: Soil asparaginase activity (mean±SE) in *Conyza canadensis* invaded and unininvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.28: Soil asparaginase activity (mean±SE) in *Sambucus wightiana* invaded and unininvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.29: Soil asparaginase activity (mean±SE) in *Anthemis cotula* invaded and unininvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.29d: Percent increase/ decrease in soil asparaginase activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Figure 4.30: Soil invertase activity (mean±SE) in *Conyza canadensis* invaded and unininvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.31: Soil invertase activity (mean±SE) in *Sambucus wightiana* invaded and unininvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.32: Soil invertase activity (mean±SE) in *Anthemis cotula* invaded and unininvaded (control) patches during (a) pre-flowering, (b) flowering and (c) post-flowering stages of growth at different study sites.

Figure 4.32d: Percent increase in soil invertase activity in the sites invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*. 
List of Tables

Table 2.1: Economic losses due to introduced pests of crops, pastures and forests in the United States, United Kingdom, Australia, South Africa, India and Brazil (US$ billion dollars per year).

Table 3.1: General characteristics of the study sites.

Table 3.2: Chemical characteristics of the three study sites of *Conyza canadensis*.

Table 3.3: Chemical characteristics of the three study sites of *Sambucus wightiana*.

Table 3.4: Chemical characteristics of the three study sites of *Anthemis cotula*.

Table 3.5: Important characteristics of the three study species.

Table 3.6: Groups of the soil microbial community targeted and primers used for the purpose.

Table 4.1a: Frequency and identity of the species of bacteria (as revealed after blast analysis of DGGE bands) at the three patches invaded by *Conyza canadensis* and their respective uninvaded (control) patches.

Table 4.1b: Maximum identity, query coverage and taxonomic information about the species of bacteria from the patches invaded and uninvaded by *Conyza canadensis*.

Table 4.1c: Frequency and identity of the species of bacteria (as revealed after blast analysis of DGGE bands) at the three patches invaded by *Sambucus wightiana* and their respective uninvaded (control) patches.

Table 4.1d Maximum identity, query coverage and taxonomic information about the species of bacteria from the patches invaded and uninvaded by *Sambucus wightiana*.

Table 4.2a: Frequency and identity of the species of fungi (Ascomycetes) (as revealed after blast analysis of DGGE bands) at the three patches invaded by *Conyza canadensis* and their respective uninvaded (control) patches.

Table 4.2b: Maximum identity, query coverage and taxonomic information about the species of fungi from the patches invaded and uninvaded by *Conyza canadensis*.

Table 4.2c: Frequency and identity of the species of fungi (Ascomycetes) (as revealed after blast analysis of DGGE bands) at the three patches invaded by *Sambucus wightiana* and their respective uninvaded (control) patches.
Table 4.2d: Maximum identity, query coverage and taxonomic information about the species of fungi (Ascomycetes) from the patches invaded and uninvaded by *Sambucus wightiana*.

Table 4.2e: Frequency and identity of the species of fungi (Basidiomycetes) (as revealed after blast analysis of DGGE bands) at the three patches invaded by *Sambucus wightiana* and their respective uninvaded (control) patches.

Table 4.2f: Maximum identity, query coverage and taxonomic information on the species of fungi (Basidiomycetes) from the patches invaded and uninvaded by *Sambucus wightiana*.

Table 4.3a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on number of soil bacteria.

Table 4.3b: Number of soil bacteria [g$^{-1}$ dry soil x 10$^4$ (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.4a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on number of soil bacteria.

Table 4.4b: Number of soil bacteria [g$^{-1}$ dry soil x 10$^4$ (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.5a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on number of soil bacteria.

Table 4.5b: Number of soil bacteria [g$^{-1}$ dry soil x 10$^4$ (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.6a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on number of soil fungi.

Table 4.6b: Number of soil fungi [g$^{-1}$ dry soil x 10$^4$ (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.7a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on number of soil fungi.

Table 4.7b: Number of soil fungi [g$^{-1}$ dry soil x 10$^4$ (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.
Table 4.8a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on number of soil fungi.

Table 4.8b: Number of soil fungi [g\(^{-1}\) dry soil x 10\(^4\) (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.9a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on soil microbial biomass.

Table 4.9b: Soil microbial biomass [µg C g\(^{-1}\) dry soil (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.10a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on soil microbial biomass.

Table 4.10b: Soil microbial biomass [µg C g\(^{-1}\) dry soil (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.11a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil microbial biomass.

Table 4.11b: Soil microbial biomass [µg C g\(^{-1}\) dry soil (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.12a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on soil microbial activity.

Table 4.12b: Soil microbial activity [µg fluorescein g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.13a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on soil microbial activity.

Table 4.13b: Soil microbial activity [µg fluorescein g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.14a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil microbial activity.
Table 4.14b: Soil microbial activity [µg fluorescein g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.15a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on soil protease activity.

Table 4.15b: Soil protease activity [µg tyrosine g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.16a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on soil protease activity.

Table 4.16b: Soil protease activity [µg tyrosine g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.17a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil protease activity.

Table 4.17b: Soil protease activity [µg tyrosine g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.18a: ANOVA results for the effect of *Conyza canadensis*, stages of its growth, site and their interactions on soil alkaline phosphatase activity.

Table 4.18b: Soil alkaline phosphatase activity [µg p-nitrophenol g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.19a: ANOVA results for the effect of *Sambucus wightiana*, stages of its growth, site and their interactions on soil alkaline phosphatase activity.

Table 4.19b: Soil alkaline phosphatase activity [µg p-nitrophenol g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.20a: ANOVA results for the effect of *Anthemis cotula*, stages of its growth, site and their interactions on soil alkaline phosphatase activity.

Table 4.20b: Soil alkaline phosphatase activity [µg p-nitrophenol g\(^{-1}\) soil h\(^{-1}\) (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-
flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.21a: ANOVA results for the effect of *Conyza canadensis*, stages of its growth, site and their interactions on soil acid phosphatase activity.

Table 4.21b: Soil acid phosphatase activity [$\mu$g p-nitrophenol g$^{-1}$ soil h$^{-1}$ (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.22a: ANOVA results for the effect of *Sambucus wightiana*, stages of its growth, site and their interactions on soil acid phosphatase activity.

Table 4.22b: Soil acid phosphatase activity [$\mu$g p-nitrophenol g$^{-1}$ soil h$^{-1}$ (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.23a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil acid phosphatase activity.

Table 4.23b: Soil acid phosphatase activity [$\mu$g p-nitrophenol g$^{-1}$ soil h$^{-1}$ (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.24a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on soil urease activity.

Table 4.24b: Soil urease activity [$\mu$g NH$_4^+$ - N g$^{-1}$ soil h$^{-1}$ (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.25a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on soil urease activity.

Table 4.25b: Soil urease activity [$\mu$g NH$_4^+$ - N g$^{-1}$ soil h$^{-1}$ (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.26a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil urease activity.

Table 4.26b: Soil urease activity [$\mu$g NH$_4^+$ - N g$^{-1}$ soil h$^{-1}$ (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.
Table 4.27a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on soil asparaginase activity.

Table 4.27b: Soil asparaginase activity [µg NH₄⁺ - N g⁻¹ soil h⁻¹ (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.28a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on soil asparaginase activity.

Table 4.28b: Soil asparaginase activity [µg NH₄⁺ - N g⁻¹ soil h⁻¹ (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.29a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil asparaginase activity.

Table 4.29b: Soil asparaginase activity [µg NH₄⁺ - N g⁻¹ soil h⁻¹ (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.30a: ANOVA results for the effects of *Conyza canadensis*, stages of its growth, site and their interactions on soil invertase activity.

Table 4.30b: Soil invertase activity [µg glucose g⁻¹ soil h⁻¹ (mean± SE)] in *Conyza canadensis* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.31a: ANOVA results for the effects of *Sambucus wightiana*, stages of its growth, site and their interactions on soil invertase activity.

Table 4.31b: Soil invertase activity [µg glucose g⁻¹ soil h⁻¹ (mean± SE)] in *Sambucus wightiana* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.

Table 4.32a: ANOVA results for the effects of *Anthemis cotula*, stages of its growth, site and their interactions on soil invertase activity.

Table 4.32b: Soil invertase activity [µg glucose g⁻¹ soil h⁻¹ (mean± SE)] in *Anthemis cotula* invaded and uninvaded (control) patches during pre-flowering, flowering and post-flowering stages of growth at different study sites.
Table 4.33: Analysis of variance of percent increase/ decrease in the attributes studied in the soils invaded by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.

Table 6.1: Percent increase/decrease in various attributes studied due to invasion by *Conyza canadensis*, *Sambucus wightiana* and *Anthemis cotula*.
