## LIST OF TABLES

<table>
<thead>
<tr>
<th>Table No.</th>
<th>Topic</th>
<th>Page No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.1</td>
<td>Classification of dermatophytes based on ecology and host preference.</td>
<td>9</td>
</tr>
<tr>
<td>2.2</td>
<td>Clinical types of tinea (ring worm infections) and associated causative organisms.</td>
<td>10</td>
</tr>
<tr>
<td>2.3</td>
<td>Cultural characteristics and other tests for differentiating dermatophyte species.</td>
<td>18</td>
</tr>
<tr>
<td>4.1</td>
<td>Details of culture positive samples recovered from patients with different tinea conditions.</td>
<td>57</td>
</tr>
<tr>
<td>4.2</td>
<td>Details of the isolation of dermatophyte species associated with different tinea conditions.</td>
<td>58-59</td>
</tr>
<tr>
<td>4.3</td>
<td>Phenotypic characteristics of dermatophyte species isolated from human patients.</td>
<td>60</td>
</tr>
<tr>
<td>4.4</td>
<td>Details of dermatophyte spp. associated with different ‘Tinea’ conditions.</td>
<td>60</td>
</tr>
<tr>
<td>4.5</td>
<td>Details of the patients of dermatophytosis with regard to their sex and age.</td>
<td>60</td>
</tr>
<tr>
<td>4.6</td>
<td>MIC values of antifungal agents against isolates of <em>T. mentagrophyte</em> as determined by broth micro-dilution test.</td>
<td>61</td>
</tr>
<tr>
<td>4.7</td>
<td>MIC values of antifungal agents against isolates of <em>T. rubrum</em> as determined by broth micro-dilution test.</td>
<td>62</td>
</tr>
<tr>
<td>4.8</td>
<td>MIC values of antifungal agents against isolate of <em>M. gypseum</em> as determined by broth micro-dilution test.</td>
<td>62</td>
</tr>
<tr>
<td>4.9</td>
<td>MIC values of antifungal agents against quality control organisms as determined by broth micro-dilution test.</td>
<td>63</td>
</tr>
<tr>
<td>4.10</td>
<td>Composite MIC values of antifungal drugs against different dermatophyte species by broth micro-dilution method.</td>
<td>63</td>
</tr>
</tbody>
