CONTENTS

CHAPTER- I

INTRODUCTION

A brief historical development of the co-ordination Chemistry

The Modern approach to the co-ordination Chemistry

Classification of Complex Compounds.

Stability of the Complexes

Factors affecting the formation and Stability of complex compounds.

Importance of stability constant

Uses of the complex compounds

Co-ordination Chemistry of Manganese and Thallium and Survey of the relevant literature on Manganese and Thallous complexes.

Object of the Work and the ligands used in the present investigation.

References

CHAPTER- II

METHODS AND PRINCIPLES

Physical Methods used for the study of complexes with details of polarography.
CHAPTER III

CHEMICALS AND INSTRUMENTAL TECHNIQUE

Chemicals used in the present investigation
Estimation of Manganese (II) and Thallium (I)
Preparation of the solutions
Experimental technique
References

CHAPTER IV

EXPERIMENTAL DATA

Polarographic data of Manganese (II) and Tl (I) complexes

CHAPTER V

RESULTS AND DISCUSSIONS

Stoichiometry of the complexes studied
Results of Polarographic studies
References
