I find immense pleasure to acknowledge all those who helped me reach this day and make this work a reality.

My greatest thanks are to my guide Dr. B. Suresh, who in the first place gave me a reason to start off with this work and believed in my ability as a student. One of the greatest things about him as a guide is his ability to allow his students to work independently, have trust in them and be patient with their shortcomings. His one advice that I will remember for life is to find humour in things which will make them easier. His invaluable guidance during my entire research tenure not only carved my scientific thinking and research skills, but also helped me mould into a better person. He is an inspiration and will always remain to all of his students.

I express my heartfelt acknowledgement to my teacher, Ms. Hetal Roy, whose affection for me can be called nothing less than motherly. Her constant belief in me provided the motivation to complete this work. She always taught me to explore new avenues other than my own laboratory to learn as many new things as possible. She has even given me the time and support which rightfully belonged to her family. So I also want to thank her husband Mr. Ajay Roy and their lovely daughter and my dearest little friend Ms. Dhanuska Roy for their friendship and support.

I express my sincere gratitude to Dr. Isha Desai who in spite of her very busy schedule, read most part of this thesis and provided many helpful suggestions.

I would like to acknowledge the Department of Science and Technology (DST), New Delhi, for providing me with financial assistance in the form of a major research project SR/S0/AS/18/ 2007 awarded to Dr. B. Suresh, under which the present work has been conducted.

I would like to thank The Head, Department of Zoology for providing me with all the necessary facilities to carry out my research work.

I also take the opportunity to thank Dr. Pragna Parikh and Dr. Dolly Kumar for their support during my research tenure.

A very special thanks to Mr. Pranav Buch and Ms. Hiral Murawala, who have been very supportive in the final proof reading of this thesis. Their help in finalizing of images and
references is greatly acknowledged. I wish them all the best in all their future research
e endeavours.

I would like to thank my senior labmates Dr. Pratyush Patankar and Dr. Gowri Kumari for
providing me with timely advice and support.

I express my sincere thanks to Urmila Ben for the timely maintenance of the financial part of
the project, which only made my focussing on the research aspect a much easier task. I also
thank the other non teaching staffs of the Zoology Department, who were helpful from time to
time.

I would like to thank my very dear friends, Priyanka, Shobha and Jinisha for their friendship
and general support.

My most sincere and heartfelt thanks are to my parents, who have strived really hard to make
me see this day. Their unconditional love and support was the reason that I could make
completion of this work a possibility. I would also like to thank my brother Anish who will
always be the greatest inspiration of my life. I have always strived to be like him and hope to
succeed some day. These people are the ones who have been most eagerly awaiting to see
this work and I hope that my efforts make them happy. With this I fondly dedicate this thesis
to my dear family and two very important people in my life- my guide Dr. B. Suresh and my
teacher, Ms. Hetal Roy. Without them, I could not dream of this thesis being possible.

Finally, I have always believed in one thing “When God pushes you to the edge of difficulty,
trust him fully, because only two things can happen; either he will catch you when you fall or
he will teach you how to fly”. With this I want to thank the Almighty, without whose
blessings, this day would not have been possible. My immense faith in him will always remain
and I hope he always makes me choose and do the right things in life.
