List of Figures

Figure: 3.1: Security Requirements in wireless sensor network.........................40
Figure: 4.1: WSN Architecture........................................................................63
Figure: 4.2: sensor node component.................................................................64
Figure: 4.3: Block Diagram of sensor nodes......................................................67
Figure: 4.4: A Star network topology.................................................................69
Figure: 4.5: A Mesh network topology...............................................................70
Figure: 4.6: A Hybrid Star-Mesh network topology..........................................71
Figure: 4.7: The components of a sensor node..................................................72
Figure: 4.8: Functional block illustration of a sensor node.................................73
Figure: 4.9: WSN Communication Types..........................................................83
Figure: 4.10: Different sensor network layer...................................................86
Figure: 5.1: Different profiles behavior authorized users and intruders...............90
Figure: 5.2: Intrusion Detection Systems..........................................................94
Figure: 5.3: An ordinary Network Intrusion Detection system structural design...99
Figure: 5.4: A Host Resident Intrusion & Distributed Network-Based Detection design..............................................................102
Figure: 5.5: Components & functioning of Intrusion Detection system...........106
Figure: 5.6: Detection node and Agent with BS structure.................................110
Figure: 5.7: Policy based IDS Architecture......................................................111
Figure: 5.8: IDA Structure..................................................................................112
Figure: 5.9: Anomaly detection Model..............................................................116
Figure: 5.10: Hybrid Anomaly Detection Model...........................................125
Figure: 5.11: IDS mechanism in wireless sensor networks.......................126
Figure: 5.12: Response of intrusion operation............................................134
Figure: 5.13: Child nodes failure.................................................................135
Figure 5.14: Sub-parent nodes failure.........................................................136
Figure: 5.15: Host Intrusion Prevention Systems..........................................140
Figure: 6.1: Statistical En-Route Filtering...................................................147
Figure: 6.2: Query message sent from the sink to node S4 performing as CH......151
Figure: 6.3: Response message sent back from node S4 to the sink.................151
Figure: 6.4: WSN structural design with different sensor node......................162
Figure: 7.1: Symmetric cryptography.........................................................174
Figure: 7.2: Asymmetric Cryptography.......................................................175
Figure: 7.3: multiple keying mechanisms...................................................182
Figure: 7.4: Loading a new password.........................................................200
Figure: 7.5: verifying a new password.......................................................200
Figure: 7.6: Screened host firewall structure.............................................215
Figure: 7.7: Screened host firewall structure (Dual homed BS)......................215
Figure: 7.8: Screened subnet firewall system network..................................216
