### CONTENTS

Synopsis ................................................................. i
Publications .......................................................... vi

Chapter 1: Introduction

1.1 Protein folding ................................................. 1
  1.1.2 Protein misfolding, aggregation and disease .......... 2
1.2 Molecular Chaperones ........................................ 2
  1.2.1 Stress and molecular chaperones ......................... 3
  1.2.2 Mechanism of up-regulation of stress response ........ 4
  1.2.3 Mechanism of down-regulation of stress response ..... 5
1.3 Classification of Molecular Chaperones .................... 6
  1.3.1 HSP100/Clp family ..................................... 6
  1.3.2 HSP90 family ............................................ 7
  1.3.3 HSP70 family ............................................ 9
  1.3.4 HSP60 family ............................................ 9
  1.3.5 HSP40 family ........................................... 10
1.4 Small Heat Shock Proteins .................................. 11
  1.4.1 Alpha-crystallin ........................................ 14
  1.4.2 αA-Crystallin ........................................... 15
  1.4.3 αB-crystallin ........................................... 16
1.5 Scope of the present study ................................... 21

Chapter 2: Association of αB-crystallin with Filamentous actin

2.1 Introduction ...................................................... 23
2.2 Materials and Methods ....................................... 25
  2.2.1 Antibodies and Reagents ................................. 25
2.2.2 Cell Culture and Heat Treatment ................................................. 25
2.2.3 Plasmid and Transient Transfection .................................. 26
2.2.4 Immunofluorescence Microscopy ........................................ 26
2.2.5 Immunoprecipitation ......................................................... 27
2.2.6 F-actin Stability Test .......................................................... 27
2.2.7 Treatment with Kinase Inhibitors .................................... 27
2.2.8 SDS-PAGE and Western Blot Analysis ................................. 28
2.2.9 Pinocytosis Analysis ............................................................ 28
2.3 Results ................................................................................. 29
2.3.1 Differential partitioning of αB-crystallin under heat stress .... 29
2.3.2 αB-crystallin forms strands upon heat treatment ............... 30
2.3.3 αB-crystallin associates with actin filaments in vivo upon heat stress .................................................... 31
2.3.4 Differential phosphorylation αB-crystallin upon heat stress ... 35
2.3.5 Association of αB-crystallin with actin filaments during heat stress depends upon its phosphorylation .... 37
2.3.6 Functional significance of αB-crystallin association with actin filaments ............................................................ 39
2.3.7 Pinocytosis Analysis ............................................................. 41
2.4 Discussion ............................................................................. 43

Chapter 3: Role of αB-crystallin in Muscle Differentiation

3.1 Introduction ............................................................................. 46
3.2 Materials and Methods ......................................................... 49
3.2.1 Antibodies and Reagents ..................................................... 49
3.2.2 Plasmids and Construction of FLAG-tagged cDNAs .......... 49
3.2.3 Cell culture and Differentiation ......................................... 50
3.2.4 Stable Transfections .............................................................. 50
3.2.5 Cell Survival Assay ............................................................... 50
3.2.6 FACS Analysis
3.2.7 Immunofluorescence Microscopy
3.2.8 SDS-PAGE and Western Blot Analysis
3.2.9 Comparison of Protein Synthesis Rate
3.2.10 Determination of Apparent Protein Half-life
3.2.11 Immunoprecipitation
3.3 Results
3.3.1 αB-crystallin alters myogenic differentiation
3.3.2 αB-crystallin maintains myoblasts in the proliferative phase
3.3.3 αB-crystallin negatively regulates the expression of myogenic markers
3.3.4 αB-crystallin alters MyoD level during muscle differentiation
3.3.5 αB-crystallin enhances the degradation of MyoD
3.3.6 Muscle differentiation induces αB-crystallin up-regulation and its phosphorylation
3.3.7 αB-crystallin inhibits caspase-3 activation during differentiation
3.4 Discussion

Chapter 4: Effect of R120G-αB-crystallin mutant on muscle differentiation

4.1 Introduction
4.2 Materials and Methods
4.2.1 Antibodies and Reagents
4.2.2 Plasmids and Construction of FLAG-tagged cDNAs
4.2.3 Cell culture and differentiation
4.2.4 Stable transfections
4.2.5 Cell survival assay
4.2.6 FACS analysis
4.2.7 Immunofluorescence microscopy
4.2.8 SDS-PAGE and Western Blot analysis .......................................................... 82
4.2.9 Determination of Protein Degradation Half-life ........................................ 83
4.3 Results ........................................................................................................ 84
4.3.1 R120G-αB-crystallin mutant inhibits myogenic differentiation ................. 84
4.3.2 Effect of R120G-αB-crystallin mutant on cell cycle regulators
    and myogenin during differentiation ............................................................. 87
4.3.3 R120G-αB-crystallin mutant modulates apparent
    stability of MyoD during muscle differentiation ........................................... 90
4.3.4 Expression profile of αB-crystallin in R120G-C2C12 cells
    during differentiation .................................................................................. 92
4.3.5 R120G-αB-crystallin mutant leads to enhanced caspase-3
    activation during muscle differentiation ...................................................... 95
4.4 Discussion ................................................................................................. 97

Chapter 5: Concluding Remarks ..................................................................... 100

Bibliography .................................................................................................... 1
