Acknowledgements

My dream of doing PhD would not have been possible but for Shashi, my PhD advisor. I owe a lot to him for his encouragement, guidance and support during this period. Freedom to work, discussions, suggestions and arguments have made me still stronger and more oriented towards research. He had been so patient when there were no results and so curious and restless when there were results. He understands the situation very well. He had never been a boss, but always a good friend. He is an amazing and wonderful personality. It was just because of him I have developed great interest in Developmental Biology, Genetics and a special love towards Drosophila.

My dream of doing PhD in a good institute would not have come true but for Dr Lalji. I thank him for providing amazing opportunities and facilities under a single roof. Regular maintenance of instruments and other things has made us reach them anytime without any hassles and made CCMB a pride place to pursue research.

Another person who had shown special interest in my research is Dr. Rakesh. I thank him for having readily helped me on many occasions. The first platform where we present our work is the genetics group meeting. I thank all members of this group, particularly Dr. Rakesh, Dr. Kashbekar, Dr Sonti and Dr. Gouri Shankar for discussions and all useful suggestions.

I thank Dr. Ramakrishna Murthy, Dr. Nagraj and Dr. Manjula Reddy for helping me in trouble shooting in protein expression and purification. I also thank Mr. Dwarkanath from animal house in injecting the protein while raising antibody. I would like to thank Dr. Nandini Rangarajan, for helping me in Confocal Microscopy, Ms Mehar Sultana for helping me in synthesizing wonderful primers. I like to thank instrumentation group for keeping all instruments in good form and readily helping whenever needed. My special thanks to Fine Chemicals group, particularly, Mr. Kishore Joshi without whom my unplanned experiments would not have worked. I also thank all Canteen and Administration Staff for help. I would like to also thank tissue culture group particularly Mrs. Varalakshmi and Mr. Mubarak for teaching me tissue culture techniques and gain confidence in that. Though I did not use this technique extensively in my present study, it was very useful when I went to Cambridge to address one particular part of research. I would like to thank Dr. Sarah Bray and her lab members Makhi, Alena and Marcus who helped me in experiments and Dr. Rob White and his lab members particularly Sherif for interactions and making my stay very useful and comfortable in Cambridge.

EMBO meetings in CCMB was a great exposure to scientific community and a wonderful opportunity for useful interactions. Strong and reinforcing statement by Scientists-Dr. Sarah Bray, Dr. Mathew Freeman, Dr. Steve Cohen, Dr. Rorth “Usha, look for another loss-of-function allele” really opened my eyes and made me step into RNAi work. EMBO 2005 was again a turning point. DSRF antibody sent voluntarily by Dr. Marcus Affolter and Knot flies from Dr. Bradley Hersh helped me give a better shape to CG32062 story. I would like to thank many fly community people, particularly Dr. Jin Jhang for UASCl-HA flies and many others who readily exchanged flies, antibodies and other information.

My very special thanks goes to a very special person in CCMB-my friend Dev, who had always taken care of me and had been with me both in ups and downs of life during this time. I enjoyed cooking, fighting and friendship with him. I am indebted to him for his love, support and encouragement.
I would like to thank all present and past lab members of the Fly lab—Ruchi, Mohit, Guru, Mrudula, Sushmita, Ramakrishnan, Jeewan, Ramesh Y, Pavan, Hina, Narendar and so on. I would like to thank Bharathi and Nagraj for introducing me to fly genetics. I thank Nagraj and Prashanth for discussions, Pallavi for argos stock and Kalpana for dpp probe. I also thank Sudha, Kavitha for lending her hands in stock transfer and ordering stocks whenever required, Prafulla and Nagraj for being my ever green friends of flylab, Tripura for helping me in thesis correction and all others for help and cooperation. I would like to thank my friends Ram Parkash and Vasanthi for having been with me in all occasions, moral support and help. I also thank Vivek Chopra for discussions on scientists, rock music and classical music, philately, my doggy "Pinky" and so on. I thank my friend Mr. Ramesh P for advice, encouragement and help. I also thank my summer student Mohit Swarnakar for helping me in mutant generation experiment. My sincere thanks to Venkatesh for helping me in fetching chemicals and other things at the needy moment, stock transfers and so on. I also thank Raza Aliji and other Nectar lab members for helping in making fly food.

I thank all CCMB friends who helped in trouble shooting—Naseer, Ram Prasad, RKG, Rajesh, Raj Purushath, Aneesh Kumar, Rajkumar, Swetha, Savithri, Raghavender, Kota venkatesh and many others. I thank Preeti Pulival for trouble shooting, thesis correction and for being a good friend. I also thank Raghu and Shoumi for helping me in various ways. I also thank all my batchmates especially Sowmya, Jobin, Thuthun, Vanniyarajan, Vipin, Swapna, Jose, Gopal, KT, Sumit for good time and help. I also thank other CCMB friends—Mamatha, Meera, Charu, Andrea, Amit, Tirumal, Ganesh, Jobby, Faiz, Abhay, Soji, Ravi, Mohan, Bindu and Seb, Aneesh Panoli, Srividya, Parmeet, Nadeem and so on. I also thank my friends Neels, Vinu, Arul, Suja Uma, Sundar, Akhil, Hari, Thalai, GK and their family members for love and encouragement.

Exposure to Music had kept me cool and happy. I thank my cousins, Ranjitha and Vijetha and friend Sneha, for opening my eyes and taking me to Music school. Special thanks to my music teachers Dr. Venkatachary, Mrs. Padma Rangaswamy and all friends.

I thank my Teachers—Prof Ramoorthy, Mr Sainathan, Dr. Pandiyarajan, Dr. Illamurugu, Dr. Arjunan, Mr. Senthil Kumar, Dr. Raviraj and Dr. Naina Singh for their blessings and encouragement. I thank my Uncle Mr. Dwarknath and my ever Best friend Dr. Srinath who had inspired me to do my PhD.

I am indebted to my Grandpa Late. Mr. Srinivasa Rao, and my grandma for teaching me values and principles of life. My deepest gratitude to my Amma and Appa for their limitless sacrifice to see my dream come true. Sincere thanks to My dear brother Badri, Chitra and Gokul and dhodamma for their love. My special thanks to my dearest Pinky kutti for her special love to me.

The list is long. There are many many well wishers who have helped me to reach this state. My sincere thanks to all of them. Blessings of Mother had been guiding me throughout my life. My special thanks to her.

I also thank Company of Biologists, UK, for providing me Traveling Fellowship to visit Dr Sarah Bray’s lab, Cambridge University, UK. I would like to thank UGC-CSIR for providing me research fellowship during PhD.
