LIST OF FIGURES

1.1: Spectral emittance at a given temperature for Black and Gray body 31

2.1: Schematic view of scan geometries of the TRMM sensors: TMI, PR and VIRS 51

2.2: AWS distribution over the Indian region 60

3.1: Brightness temperature on 7th June 2007 73

3.2: Daily rainfall from GPI technique on 7th June 2007 73

3.3: Daily rainfall from TRMM-3B42 on 7th June 2007 73

3.4: Daily rainfall from GPI technique on 8th June 2007 74

3.5: Daily rainfall from TRMM-3B42 on 8th June 2007 74

3.6: Daily rainfall from GPI technique on 16th August 2007 74

3.7: Daily rainfall from TRMM-3B42 on 16th August 2007 74

3.8: Scatter plot between rainfall from TRMM-3B42 and GPI technique 75

3.9: Comparison of rainfall from TRMM-3B42 and the GPI technique 76

3.10: Scatter plot between the rainfall from GPI and AWS rain-gauge 77

3.11: 3-hourly rain from GPI on 20th Oct. 08 at 0000UTC 78
3.12: 3-hourly rain from DWR on 20th Oct. 08 at 0000UTC

3.13: 3-hourly rain from GPI on 22nd Nov 08 at 0000UTC

3.14: 3-hourly rain from DWR on 22nd Nov 08 at 0000UTC

3.15: Monthly rain rate from GPI for Apr. 2008

3.16: Monthly rain rate from GPCP for Apr. 2008

3.17: Daily rainfall from GPI technique on 9th June 2007

3.18: Daily rainfall from TRMM-3B42 on 9th June 2007

3.19: Daily rainfall from MGPI technique on 9th June 2007

3.20: Daily rainfall from GPI technique on 13th Oct 07

3.21: Daily rainfall from TRMM-3B42 on 13th Oct 07

3.22: Daily rainfall from MGPI technique on 13th Oct 07

3.23: Comparison of rainfall from GPI and MGPI with the TRMM-3B42

3.24: Scatter plot between the rainfall from MGPI technique and TRMM3B42

3.25: Scatter plot between the rainfall from MGPI technique and AWS rain gauge

3.26: Scatter plot between the rainfall from MGPI technique and DWR
4.1: Comparison between the derived F and observed 85-GHz vertically polarized measurement for the land portion

4.2: Comparison between the derived F and observed 85-GHz vertically polarized measurement for the oceanic portion

4.3: Scatter plot between the scattering index from the SSM/I and rainfall from PR for the land portion

4.4: Scatter plot between the scattering index from the SSM/I and rainfall from PR for the oceanic portion

4.5: Rainfall rate using the Ferraro global scheme on 23rd July 2008 at 1245 UTC

4.6: Rainfall rate using the present regional scheme on 23rd July 2008 at 1245 UTC

4.7: Rainfall rate using the Ferraro global scheme on 17th July 2008 at 0350 UTC

4.8: Rainfall rate using the Present regional scheme on 17th July 2008 at 0350 UTC

4.9: Rainfall rate from the regional scattering index scheme (present technique) on 9th Sept05 at 1240 UTC

4.10: Rainfall rate from the TMI-2A12 (GPROF algorithm) on 9th Sept05 at 1250 UTC

4.11: Rainfall rate from the regional scattering index scheme (present technique) on 14th August 06 at 0235 UTC

4.12: Rainfall rate from the TMI-2A12 (GPROF algorithm) on 14th August 06 at 0245 UTC
4.13: Rainfall rate from the regional scattering index scheme (present technique) on 4th June 07 at 0240 UTC

4.14: Rainfall rate from the TMI-2A12 (GPROF algorithm) on 4th June 07 at 0252 UTC

4.15: Histogram of rainfall from TMI-2A12 (GPROF) and regional scattering index scheme (present technique) over land

4.16: Histogram of rainfall from TMI-2A12 (GPROF) and regional scattering index scheme (present technique) over ocean

4.17: Scatter plot between the rainfall from present technique and GPROF algorithm over land

4.18: Scatter plot between the rainfall from present technique and GPROF algorithm over ocean

4.19: Scatter plot between the rainfall from present technique and AWS rain gauge

4.20: Scatter plot between the rainfall from Ferraro global scheme and AWS rain gauge

4.21: Rain rate from the DWR on 21st October 2008 at 0125 UTC

4.22: Rain rate from present technique on 21st October 2008 at 0130 UTC

4.23: Rain rate from the DWR on 22nd November 2008 at 1235 UTC

4.24: Rain rate from the present technique on 22nd November 2008 at 1242 UTC
4.25: Scatter plot between the rainfall from present technique and DWR

5.1: Scatter plot between Meteosat brightness temperature and PR-rain rates (x-axis Meteosat brightness temperature in Kelvin and y-axis Precipitation Radar rainfall in mm)

5.2: Relationships between the rainfall and the brightness temperature for the different seasons

5.3: Scatter plot between the rainfall rate from present technique and the Precipitation Radar Rainfall rate (x-axis, estimated rainfall from present technique and y-axis, Precipitation Radar rainfall)

5.4: Scatter plot between Kalpana brightness temperature and PR-rain rates (x-axis Kalpana brightness temperature in Kelvin and y-axis Precipitation Radar rainfall in mm)

5.5: Brightness temperature in Kelvin on 27th October 06 1500 UTC

5.6: 3-hourly Rainfall in mm from present technique on 27th October 06 1500 UTC

5.7: 3-hourly Rainfall in mm from TRMM-3B42 on 27th October 06 1500 UTC

5.8: Brightness temperature in Kelvin on 5th June 06 0300 UTC

5.9: 3-hourly Rainfall in mm from present technique on 5th June 07 0300 UTC

5.10: 3-hourly Rainfall in mm from TRMM-3B42 on 5th June 07 0300 UTC

5.11: 24-hour accumulated Rainfall in mm from present technique on 25th July 07
5.12: 24-hour accumulated Rainfall in mm from TRMM-3B42 on 25th July 07

5.13: Rainfall validation: Present technique vs. TRMM-3B42 for the S-W monsoon period (x-axis, 3-hourly rainfall from TRMM-3B42 and y-axis, 3-hourly rainfall from present technique)

5.14: Rainfall validation: Present technique vs. TRMM-3B42 for the N-E Monsoon period (x-axis, 3-hourly rainfall in mm/3h from TRMM-3B42 and y-axis, 3-hourly rainfall from present technique in mm/3h)

5.15: Scatter plot between the rainfall from present technique and TRMM-3B24 over the land

5.16: Scatter plot between the rainfall from present technique and TRMM-3B24 over the ocean

5.17: Scatter plot between the rainfall from GPCP and present technique

5.18: Scatter plot between the rainfall from present technique and AWS rain gauge for S-W monsoon period

5.19: Scatter plot between the rainfall from TRMM-3B42 and AWS rain gauge for S-W monsoon period

5.20: Range wise rainfall validation: TRMM-3B42 and present technique vs AWS rain gauge for S-W monsoon periods (bin wise comparison, in x-axis range wise rainfall from AWS rain gauge, while in y-axis range wise rainfall from present technique and TRMM-3B42, black dots represent rainfall from present technique, while white dots represents rainfall from TRMM-3B42, vertical bars represents the standard deviations of rain plotted in y-axis)
5.21: Scatter plot between the rainfall from present technique and AWS rain gauge for N-E monsoon period

5.22: Scatter plot between the rainfall from TRMM-3B42 and AWS rain gauge for N-E monsoon period

5.23: Range wise rainfall validation: TRMM-3B42 and present technique vs AWS rain gauge for N-E monsoon periods (bin wise comparison, in x-axis range wise rainfall from AWS rain gauge, while in y-axis range wise rainfall from present technique and TRMM-3B42, black dots represent rainfall from present technique, while white dots represents rainfall from TRMM-3B42, vertical bars represents the standard deviations of rain plotted in y-axis)

5.24: Rainfall in mm. from RADAR on 22nd Oct08 0000UTC

5.25: Rainfall in mm. from present technique 22nd Oct08 0000UTC

5.26: Rainfall rate in mm. from RADAR on 20th Dec 07 0250UTC

5.27: Rainfall rate in mm. from present technique on 20th Dec 07 0250UTC

5.28: Scatter plot between the rainfall from present technique and DWR

5.29: Brightness temperature 8July06 1200 UTC

5.30: Rainfall from present technique 8July06 1200 UTC

5.31: Rainfall from TRMM-3B42, 8July06 1200 UTC
5.32: Scatter plot between the 3-hourly rainfall from TRMM-3B42 and Present technique

5.33: Scatter plot between the rainfall from Rain gauge and Present technique

5.34: Scatter plot between the rainfall from DWR observation and the rainfall from present technique
