ACKNOWLEDGEMENT

I take here the liberty of expressing my deep sense of gratitude towards several individuals for their assistance, interest, encouragement and contributions in preparation of this thesis. I know words may not suffice the expression of the hearty feelings they have towards me but I will fail my duties if couldn’t do this.

To work under the able guidance of Prof. Ramesh K. Goyal had always been my wish. His efficiency in terms of knowledge and hard work had always provided an inspiration to me. Without his help and co-operation I could perhaps not have been able to handle the subject with clarity of mind and purpose. He could emboss a permanent impression in my heart as a kind and a highly interactive teacher. It won't be surprising if in my career as a teacher my students may observe some of this in me too. All credit for this should go to none but him.

Everything in this project would have become impossible if I would not have been granted the facilities to work at L.M. College of Pharmacy. For this I thank Prof. C.J. Shishoo, Ex-Principal and Prof. M.C. Gohel the present Principal of L.M. College of Pharmacy. In a similar way, the granting of permission by Prof. D.D. Santani, Head, Department of Pharmacology, L.M. College of Pharmacy, to work in his laboratory needs special thanks from my side. His positive criticism and constant encouragement had always helped me a lot.
How can I forget the Late Dr. M.A. Panjabi, M.S. (Ophthalmology) with whom I used to seat long hours for framing this project? His special interest in research was a great inspiration for me.

I am highly thankful to Dr. Khamar (M.S. Ophthalmology) for sharing his research experience with me and guiding me at initial stages of the project.

I am also thankful to Shri H.N. Kakrani and Shri N.M. Patel, Principal of Tolani Institute of Pharmacy, Adipur and B.M. Shah College of Pharmacy, Modasa for their active support and co-operation when I was a teacher in this institute.

Prof. N.S. Parmar, Director, K.B. Institute of Pharmaceutical Education and Research, Gandhinagar, has a unique characteristic of providing full cooperation, encouragement and active guidance to any person undergoing research. I am extremely lucky to achieve maximum benefit of him. His inspiration and ever helping attitude mixed with his ideology and international fame knowledge was a unique blend I got from him. I will try my best to allow this great characters of him to percolate to my students throughout my career as a teacher.

I am also thankful to Dr. T.P. Gandhi, Vice President, Cadila Pharmaceuticals Ltd. for providing the facilities available in his R & D Department for some of my studies.

I wish my sincere and heartfelt thanks to my best friend Dr. Milan C. Satia (Sr. Manager, R & D Department, Cadila Pharmaceuticals Ltd.) for not only encouraging me and providing me valuable suggestions but also helping me in
many studies at Cadila Pharmaceuticals Ltd. His busy schedule had never been an excuse to me.

The co-operation from Dr. Kantibhai Patel, M.S. (Ophthalmology) in providing tonometer for the study along with the useful guidance in using the instrument has really helped me a lot in much of my work. I would remain indebted to him for ever.

My thanks are due to my teachers Dr. Anitaben Mehta, Shri R.V. Bhatt, Dr. Sunita Goswami and Dr. Parloop Bhatt for their help and co-operation in the study. I also thank Sunil Sharma and Naikaj Choksi for the support and co-operation in the study.

I wish to express a word of appreciation to all my colleague staff members at Tolani Institute of Pharmacy, Adipur; B.M. Shah College of Pharmacy, Modasa, B.N. College of Pharmacy, Udaipur and K.B. Institute of Pharmaceutical Education and Research, Gandhinagar. Their sustained encouragement and co-operation had always been with me.

My special thanks resides with my family members. My wife, father, mother and all the other family members have shown unwavering patience and forbearance during the work. They all have not only encouraged me for the work but also have lifted many of my family responsibilities on to their shoulders without showing slightest of hesitation. I will remain permanently indebted to them for their selfless help.

The present form of the thesis, would have been different, if Shri Saurabhan would not have typed it. His expert and efficient typing is matchless.
More than that, his ever co-operative attitudes are unmatchable. I sincerely thank him for his wonderful job.

The partial financial support in the form of minor research grant from Gujarat Council of Science and Technology, Gandhinagar was a real boost to me. I sincerely acknowledge this.

My thanks are due to Mrs. Chetnaben Shah for her assistance in the work. I am also thankful to Shri Shivabhai and Shri Krishnabhai for their assistance in some of my work.

I am also indebted to various companies such as Merck Sharpe and Dhome, U.S.A.; Schering Plough Research Institute, U.K.; Hoechst, Germany; and Cadila Pharmaceuticals Ltd., Ahmedabad for providing free gift samples of some drugs.

Many had supported me in their own capacities. Few whom I would have forgotten to mention could only be due to my poor memory and I beg a pardon for the possible serious mistake.

Gaurang B. Shah
