Acknowledgements

If I were to start thanking everyone for all their help during my Ph.D., I would probably never be able to stop!

I would like to put down on paper my gratitude to Dr. Chandrima Shaha, my supervisor for her constant encouragement and guidance during the course of my Ph.D. work. She has been very supportive all the way. Being with her has taught me to be persevering above everything else. Working with her kept me alert always, and lately I have become a lot more organized than I could ever think myself capable of! I shall always hope to work with people who’d be as easily accessible as she is. Working in SBL is real picnic as long as you keep at your job!!

Dr. Rajesh Anand has been particularly co-operative in ensuring a regular supply of experimental animals for my experiments. I thank Jaspal for his efficiency and patience in taking out the animals from the colonies. Special Thanks to Dr. Dinakar Salunke and Sushma for sequencing many of my samples very promptly. Members of my doctoral committee, Dr. JK Batra, Dr. RP Roy, Dr. Om Singh, Dr. Rama Mukherjee and Dr. Kasturi Datta were very forthcoming with their valuable suggestions in my dc meetings and constantly encouraged me to go on. My thanks are due to the Director, Prof. Sandeep Basu who took particular interest in my work and made himself available for all my dc presentations. It was very kind of Dr. Satyajit Rath to have spared time to critically review my work on different occasions. I learnt my basics in designing experiments with proper controls from Chinmoy. I wish he had stayed on longer in the lab. Collaborating with Pawshe was fun as we were great pals. I am obliged to the National Institute of Immunology for providing fellowship during the course of this investigation. Financial assistance from CSIR for presenting this work at an international meeting is gratefully acknowledged.

I wish to thank Mr. Akhilesh Kumar for all his help in academic matters. Thanks to Shri. Babulal and Shri. Satish Sharma for doing a great job in bringing out the copies of the thesis. A million thanks to Gopal Basnotra for taking out innumerable prints!

My Ph.D. would have made no sense without the kind of friendships I cultivated in NII and I have been particularly fortunate in this regard. Sumita and I shared great times even within the short period of her stay in NII; she has made herself quite indispensable to me for times to come. I have had the best of times in the lab with Ramesh, Gopal (my generous junior!), Ratan, Eunice and recently with Kondal, Ravi and Bettina. Each one of them put up with my idiosyncrasies without a complaint. Ramesh has been a great support and an exceptional friend and it was he who taught me to learn everything. I would never forget those chatty ‘tea-breaks’ in the lab. Anjali has taught me not just experiments but how to keep myself excited about them! I shall always be happy to have met her in the real sense of the term. With Abhijit, I never had to start from the beginning. I could always count on him for all my last minute troubles! RSH, I shall remember always, for all the wonderful people who stayed and
stay in it. They make the place feel really like home.

How can I not thank Neeraj for all his readiness to help out with anything? Thank you Jatinder for being there in times of need!

Mrs Vijaya Srinivas, my music teacher, is an invaluable person. I have had the great fortune of spending a lot of time with her. She has taught me not just the basics of music but also, the way to live life to its full. My music classes gave me all the sap that I needed, to go on with the Ph.D. I have no words to thank you Chitti, Chittappa, Bakul! I could always come home to you when I needed to.

Amma, Appa! I am here today because of you. Sumati! My Ph.D. is a token of your efforts in bringing me up. Srivats came into this world announcing joy for all of us at home, during my Ph.D.

Aai, I would not have been able to succeed without your generosity.

Above all, I owe everything to Jayant.
